Core Economics Course 12: DEVELOPMENT ECONOMICS-I

Course Description

This is the first part of a two-part course on economic development. The course begins with a discussion of alternative conceptions of development and their justification. It then proceeds to aggregate models of growth and cross-national comparisons of the growth experience that can help evaluate these models. The axiomatic basis for inequality measurement is used to develop measures of inequality and connections between growth and inequality are explored. The course ends by linking political institutions to growth and inequality by discussing the role of the state in economic development and the informational and incentive problems that affect state governance.

Course Outline

1. Basic Problems of Development

Measures, comparing development trajectories across nations and within them. Meaning and Characteristics of an Underdeveloped Country and obstacles of Economic Development.

2. Growth Models

The Harrod-Domar model and John Robinson Model.

3. Poverty and Inequality: Definitions and Measures

Inequality axioms; a comparison of commonly used inequality and its measures; connections between inequality and development; poverty measurement; characteristics of the poor and its causes.

4. Domestic measures for economic development

Fiscal and Monetary Policy in Economic Development and Role of the state in Economic Development.
