List of Revised Courses

Department

: Industrial and Production Engineering

Programme Name : *B.Tech.*

Academic Year : 2020-21

List of Revised Courses

Sr. No.	Course Code	Name of the Course
01.	IP03TBS05	Numerical Methods
02.	IP03TPC01	Strength Of Material
03.	IP03TPC02	Theory Of Machines
04.	IP03TPC03	Manufacturing Processes-I
05.	IP03PPC01	Theory Of Machines Lab
06.	IP03PPC02	Material Testing Lab
07.	IP04TBS06	Statistical Methods
08.	IP03TPC04	Marketing Management
09.	IP04TPC05	Material Science
10.	IP04TPC06	Fluid Mechanics
11.	IP04TPC07	Manufacturing Processes–II
12.	IP04THS021	Business Communication And Presentation Skill
13.	IP04THS022	Occupational Health And Safety
14.	IP04PPC04	Fluid Mechanics Lab
15.	IP05TPC08	Design Of Machine Elements
16.	IP05TPC09	Metal Cutting
17.	IP05TPC10	Statistical Quality Control
18.	P05TPE11	Industrial Engineering
19.	IP05TPE12	Work Study And Ergonomics
20.	IP05TPE21	MEMS & Nanotechnology
21.	IP05TPE22	I. C. Engine
22.	IP05TPE23	Mechatronics
23.	IP05THS41	Financial Management
24.	IP05THS42	Managerial Economics
25.	IP05THS43	Financial Accounting And Costing
26.	IP05PPC05	Metal Cutting Lab
27.	IP05PSC01	Seminar
28.	IP06TPC11	Operation Research

Minutes of Meetings (MoM) of Board of Studies (BoS)

गुरू धासीदास विश्वविद्यालय (कोनेक सेंह २०१३ रहे के जोवर) कोनी, बिलासपुर - 495009 (छ.ग.)

	Academic Year : 2020-21
School	: School of Studies of Engineering and Technology
Department	: Industrial and Production Engineering
Date and Tim	e : August 14, 2020 – 12:00 PM
Venue	: CAD Lab G10

The scheduled meeting of member of Board of Studies (BoS) of Department of Industrial and Production Engineering, School of Studies of Engineering and Technology, Guru Ghasidas Vishwavidyalaya, Bilaspur was held to design and discuss the B. Tech. Third year (III and IV semesters) scheme and syllabi.

The following members were present in the meeting:

- 1. Prof. G.K. Agrawal (External Expert Member BoS, Professor, GEC Bilaspur)
- 2. Mr. Dalbir Singh Rekhi (Member BoS Industry Expert, J.S.P.L. Raigarh CG.)
- 3. Prof. Mukesh Kumar Singh (Member BoS, Professor, Dept. of Industrial and Production Engineering)
- 4. Mrs. Arpita Roy Choudhary (HOD, Assistant Prof., Dept. of Industrial and Production Engineering-cum Chairman, BOS)
- 5. Mr. C.P. Dewangan (Member BoS, Associate Professor, Dept. of Industrial and Production Engineering)
- 6. Mrs. Disha Dewangan (Member BoS, Assistant Professor, Dept. of Industrial and Production Engineering)
- 7. Prof. S.C. Srivastava (Invited Member, Professor, Dept. of Industrial and Production Engineering)
- 8. Mr. Nitin Kumar Sahu (Invited Member, Assistant Professor, Dept. of Industrial and Production Engineering)
- 9. Mr. Kailas Kumar Borkar (Invited Member, Assistant Professor, Dept. of Industrial and Production Engineering).

Prof. G.K. Agrawal (External Expert Member BoS, Professor, GEC Bilaspur) and Mr. Dalbir Singh Rekhi (Member BoS Industry Expert, J.S.P.L. Raigarh CG.), has attended the online meeting and they have given their consent via mail.

Following points were discussed during the meeting

- 1. In the meeting, Choice Based Credit System(CBCS) scheme and syllabus of B.Tech III and IV semester (Industrial and Production Engineering) were discussed in details. All suggestion of the members are incorporated and modified and then recommended for approval.
- 2. The CBCS scheme and syllabus of B.Tech (Industrial and Production Engineering) III,IV semester have been accepted by the BOS (I.P.E.)

The committee discussed and approved the scheme and syllabi. The following courses were revised in the of B. Tech. second year (III and IV Semesters):

Numerical Methods (IP03TBS05)

B.Tech III Sem.	IP03TBStd	Numerical Methods	3	0	0	15	15	70	100	3

COURSE OBJECTIVES:

- 1. To provide the information related to existence and uniqueness criteria applied to numerical methods.
- To provide the knowledge of convergences criteria and awareness of reasons behind the failure of supprical methods.
- To find manarical approximations to the roots of equation by Newton method, Bisection method, Securi method, etc.
- To find numerical solution to a system of linear equations by Gaussian elimination and Gauss-Siedel iterative etc.
- 5. To find numerical solution for orderary and partial differential equation.

COURSE OUTCOMES:

After completion of the course, the students will be able to:

- CO1: Apply knewledge of numerical analysis for understanding, formulating and solving engineering problems.
- CO2: Acquire knowledge and hands-on competence in applying the concepts of Numerical Analysis and computer.
- CO3: Programming in the analysis of mechanical systems.
- CO4: Identify, analysis, and solve mechanical engineering problems neefel to the society.

CO5: Work effectively with engineering and science teams as well as with multidisciplinary analysis.

COURSE CONTENT:

Module -1

Introduction of errors and their analysis, types of errors, numerical problems on error analysis. Curve fitting: method of least spares, fittings of straight line and parabola and by method of moments, fitting of exponential curves, fitting of the curve.

Module - II

Numerical solution of algebraic and transcendental equations: Graphical method, bisection method, Secant method, Regula-faini method, Newton Raphson method. Solution of a system of simultaneous linear algebraic equations direct method: Gauss elimination method, Gauss Jordan method, Inerative methods, Incobi iterative method, Gauss Seidel iterative method.

B.Tech III Sen.	IP011E505	Engineering Thermodynamic	$S^{(i)}$	1	-	15	в	-70	100	- (†

COURSE OBJECTIVES:

 This course deals with the fundamentals of thermodynamics including theoreodynamic systems, properties, and relationships among the thermos-physical properties, the laws of thermodynamics and applications of these basic laws in thermodynamic systems.

To enable the students to understand second law of thermodynamics and apply it to various systems, note the significance of the results and to know about entropy and second law aspects of daily life.

3. To enable the students about properties of pure substances and to analyse vapour power cycle.

COURSE OUTCOMES:

After completion of the course, the students will be able to:

CO1: Apply principles of engineering, basic science, and mathematics (including multi-variant calculus and differential equations) and thermodynamics to model, analyse, design, and realize physical systems, components, or processes.

CO2: Identify, formulate, and solve engineering problems.

- CO3: Apply modern engineering tools, techniques and resources to solve complex mechanical engineering activities with an understanding of the limitations.
- CO4: serprehend the thermodynamics and their corresponding processes that influence the behaviour and pespoase of structural components.

COURSE CONTENT:

Module - I

Basic concepts: Concept of continuum, macroscopic and microscopic approach.

Thermodynamic systems: Closed, open and isolated system, property, state, path and point function, process, quant static process, work, modes of work transfer, Zeroth law of thermodynamics, concept of temperature and heat, concept of ideal and real.

First law of thermodynamics: Concepts of internal energy, specific heat capacities, enthalpy, energy balance for closed and open systems, energy balance for steady flow systems, steady and unsteady flow energy equation and its applications.

गुरू धासीवास विश्वविद्यालय (कोनेक के 2011 2011 2014) कोनी, बिलासपुर - 495009 (छ.ग.)

Guru Ghasidas Vishwavidyalaya Matultioni, kilideliy teletri kiratis kr. 2015. Bd 2019 Koni, Bilaspur – 495009 (C.G.)

DEPARTMENT OF INDISTRIAL 4. PRODUCTION ENGINEERING, GGV, BILASPUR CG.

Module - II

Second law of thermodynamics: Thermal energy reservoirs, second law, Carnot cycle, Carnot theorem, thermodynamic temperature scale, Carnot heat engine, refrigerator and heat pump. Clausias inequality, concept of entropy, principle of entropy, revenible and ineversible processes, entropy change during process, available and un-ormilable margy, availability for closed and open system, Third law of thermodynamics.

Module - III

Properties of pure substances: Thermodynamic properties of pure substances in solid, liquid and vapour phases. Phase rule, P–V, P–T, T–V, T–S, H–S diagrams, PVT surfaces, thermodynamic properties of steam, calculations of work done and heat transfer in non– flow and flow processes.

Module - IV

Vapour power cycles: Camot cycle, Rankine cycle, Roheat cycle, Regenerative cycle, Binary vapour cycle, thermal efficiency and work ratios, factors affecting efficiency and work output.

Module - V

Heat Transfer: Various modes of heat transfer, Fourier's, Newton's and Stefan Boltzmann's law, combined modes of heat transfer, thermal diffusivity, overall heat transfer coefficient. Basic concept of convection and its application. Thermal Radiation: black and non-black bodies, Kirchhoff's law, intensity of radiation, radiation exchange between black surface, geometric configuration factors.

Module - I

Simple stresses and strains: Concept of stress and strain, St. Venant's principle, stress and strain diagram, elasticity and plasticity, types of stresses and strain, Hooke's law, stress-strain diagram for mild steel, working stress, factor of safety, lateral strain, Poisson's ratio, volumetric strain, Elastic moduli and relationship between them: bars of varying section, composite bars, temperature stresses. Strain energy, realizence, gradual, redden, impact and shock loadings, simple applications.

Module -II

Compound stresses and strains: Two dimensional system, stress at a point on a plane, principal stresses and principal planes. Molar circle of stress, ellipse of stress and their applications. Two dimensional stress-strain system, principal strains and principal axis of strain, circle of strain and ellipse of strain, relationship between elastic constants.

Module - III

Bending moment and Shear force diagrams: Bending moment (BM) and shear force (SF) diagrams. BM and SF diagrams for cantilevers simply supported and fixed beams with or without overhangs.

Criteria – I (1.1.2)

а.

गुरू धासीवास विश्वविद्यालय (कोनेक के 2011) कोनी, बिलासपर - 495009 (छ.ग.)

DEPARTMENT OF INDUSTRIAL & PRODUCTION ENGINEERING, GGV, BILASPUR CG

Calculation of maximum BM and SF and the point of contra flexure under concentrated loads, uniformly distributed loads over the whole span or part of span, combination of concentrated loads (two or three) and uniformly distributed loads, aniformly varying loads, application of moments.

Shear stresses: Derivation of formula, shear stress distribution across various beam sections like rectangular, circular, triangular, I, T angle sections.

Module - IV

Flexural Stresses, theory of simple bending, assumptions, derivation of bending equation: MT = Ey = ER, Neutral axis, determination of bending stresses, section modulus of sectangular and circular sections (solid and hollow), I, T, angle and channel sections, design of simple beam sections.

Slope and deflection: Relationship between moment, slope and deflection, moment area method, Macasalay's method. Use of these methods to calculate slope and deflection for determinant beams. Module - V

Torsion: Derivation of torsion equation and its assumptions. Applications of the equation of the hollow and solid circular shafts, torsional rigidity, combined torsion and bending of circular shafts, principal stress and transitions shear stresses under combined loading of bending and torsion. Analysis of close coiled helical springs.

Thin Cylinders and Spheres: Derivation of formulae and calculations of hoop stress, longitudinal meas in a cylinder and sphere subjected to anternal pressures.

DEPARTMENT OF INDESTRIAL & PRODUCTION ENGINEERING, GGV, BILASPUR CG

Module - III

Classification of cams and followers, terminology and definitions, displacement disgrams, uniform velocity, parabolic, simple harmonic and cycloidal motions, derivatives of follower motions, specified contour cams, circular and tangent cams, pressure angle and undepenting, sizing of cams, graphical and analytical disc cam profile synthesis for rollar and flat face followers.

Module - IV

Involute and cycloidal gear profiles, gear parameters, fandamental law of gearing and conjugate action, spur gear contact ratio and interference/undercotting, helical, bevel, worm, rack & pinion gears, epicyclic and regular gear train kinematics, compound, severted and opicyclic gear trains, velocity ratio of epicyclic gear trains.

Module - V

Turning moment of Plywheel: Function of a flywheel, crank effort diagrams, fluctuation of speed and energy, effect of centrifugal tension of flywheel, inertia torque and its effects on crank effort diagrams. Governors: Characteristics of centrifugal governors, Gravity controlled governors, Porter and Poell. Spring centrolled centrifugal governor: Hartung, & Hartush governor: Performance parameter: sensitivity, stability, incchronium, governor effort and power.

Guru Ghasidas Vishwavidyalaya Matiliani kikisi kikisi kami kiratis kami Koni, Bilaspur – 495009 (C.G.)

DEPARTMENT OF INDISTRIAL & PRODUCTION ENGINEERING, GGV, BILASPUR CG

Gating system: Elements & design of gating system, design of riser, solidification of casting. Module - II

Melting furnaces and practices: Melting cast icon, steel and non-ferrous material, capola, charge calculation, open furnaces, converter and crucible farnaces, electric, direct arc farnace, inductive farnace. Module - 10

Special casting processes: Centrifugal and investment casting, shell, types and principle of die casting, squeeze casting, gravity and pressure die casting, die casting consideration, continuous casting, centrifugal casting, shish casting, casting defects.

Module - IV

Metal forming: Need and classification, elastic and plastic deformation, yield criteria, fandamentals of hot and cold working processes.

Drawing: Drawing process geometry and analysis of wire and sheet drawing for load and power calculations, maximum reduction possible.

Rolling: Classification of rolling, process geometry and analysis of plate rolling for rolling load, rolling, pressure and power calculations, defects in rolled products.

Forging: Classification of Forging, determination of forces in disc forging considering sticking and slipping, forging defects.

Extrusion: Classification, process geometry and analysis of rod and short extrusion for load and power calculations, maximum reduction possible, defects in extruded product.

Module -V

Work holding device: Introduction to jugs, fixtures and their types, design criteria, economic justification, fundamental principles of design of jugs and fixtures, location and clamping in jugs and fixtures, drilling jugs, milling fixtures, indexing jugs and fixtures.

Course Name & Semester		Inner	PE	RIO	ØS	EVALUATIO	IN SCI	IEME	CREDITS
	Coarse No.	SUBJECT	1.	T	P	INTERNAL ASSESSMENT	ESE	SUB- TOTAL	
B.Tech III Sem	IP03PBS03	Programmin g in C & MATLAB	-	+	1	30	20	50	1

COURSE OBJECTIVES:

- 1. To familiarize the student in introducing and exploring MATLAB & C softwares.
- 2. To enable the student on how to approach for solving engineering problems using simulation tools.
- 3. To prepare the students to use MATLAB/C in their project works.
- 4. To provide a foundation in use of this softwares for real time applications

COURSE OUTCOMES:

After completion of the course, the students will be able to

- CO1: Perform the programming & simulation for engineering problems.
- CO2: Learn importance of this software for lab experimentation.
- CO3: Articulate importance of software's in research by simulation work.
- CO4: In-depth knowledge of providing virtual instruments on C language environment.
- CO5: Ability to write basic mathematical, numerical method problems in MATLAB.

LIST OF EXPERIMENT:

- Write a programme which creates and uses array of object of a class (for example implementing the list of student of their department having details such as name, age etc).
- 2. Write a programme to find maximum out of two manbers.
- 3. Write a programme using copy constructor to copy data of an object to another object.
- 4. Write a programme to over knd new/delete operators in a class.
- 3. Write a programme to illustrate the use of pointers two object which are related by inheritance.
- 6. Write a programme showing data conversion between objects of different classes:
- 7. Weite a programme to show conversion from string to integer and vice versa.
- 8. To know the history and features of MATLAB & the local environment of MATLAB.
- 9. Find the roots of equations find the values at different points and plot the graph.
- 10. Find the derivative of an equation in MATLAB.
- 11. Find the area enclosed between the curves in MATLAB.
- 12. Find the addition, subtraction, multiplication, transpose and inverse of matrices.
- 13. Find the rank: Eigen values and Eigen vector of matrices.
- Write a program to find the coots of an equation using Bi-section method, Regula-falsi method and Newton Raphuca method.
- 15. Plot the surface for an equation.

B Tech IV Sem	IP94THS00	Statistical Methods	3	-		13	15	70	109	3

COURSE OBJECTIVES:

 The objective of this course is to provide an understanding for the graduate engineering student on statistical concepts to include measurements of location and dispersion, probability, probability distributions, sampling, regression, and correlation analysis.

COURSE OUTCOMES:

After completion of the course, the students will be able to:

- CO1: Calculate and apply measures of location and measures of dispersion grouped and ungrouped V data cases.
- CO2: Apply discrete and continuous probability distributions to various business problems.

CO3: Perform test of hypothesis as well as calculate confidence interval for a population parameter for single sample and two sample cases and learn the concept of p-values.

CO4: Identify non-parametric test such as the Chi-square test for independence as well as goodness of fit.

COURSE CONTENT:

Module - 1

Introduction to statistics, mathematical statistics, variable, frequency distribution, exclusive and inclusive class intervals, type of series. Geophical representation: histogram, frequency polygon, O give measure of central tendency various types of averages, mean median mode for grouped and ungrouped data, geometric mean, harmonic mean, measure of dispersion Skewness and Kurtosis.

Module - H

Curve fittings by method of least square, straight line parabola correlation, scatter Cliagrem's Karl Pearson's coefficient of correlation, limits for correlation coefficient, rank correction, regression linear regression, equation to the line of regression, regression coefficient, angle between two lines of regression. Module – HI

Theory of probability: Mathematical and statistical definition of probability sample space, finite sample space sample point, events theorem of total probability, sample and compound event, conditional probability, theorem of compound probability, **Baye's theorem**, use of binomial theorem.

2

Guru Ghasidas Vishwavidyalaya Matallasah kikisih telatri kestis kemi 5 ditti Koni, Bilaspur – 495009 (C.G.)

DEPARTMENT OF INDUSTRIAL & PRODUCTION ENGINEERING, GGV, BILASPUR CG

Module - IV

Theoretical distribution: Binominal distribution mean, standard deviation and Pearson's β and γ coefficient, Poisson distribution, mean, variance normal distribution.

Module - V

Random and simple sampling: Mean standard deviation in simple sampling of attribute, test of significant for large sample test of significance based on Chi square, T, F and Z distribution degree of freedom, condition for applying.

COURSE OBJECTIVES:

1. To learn about basic concepts of marketing and selling.

2. To demonstrate importance of need, wants and demand.

3. To learn implicating strategies in different phases of product liferytile.

COURSE OUTCOMES:

After completion of the course, the students will be able to

CO1: Apply enriched knowledge towards developing product, production means and philosophies.

CO2: Apply high performance business othics and culture in behaviour.

CO3: Identify, analyze, develop & manage development program, sales promotion and public relation. COURSE CONTENT:

Module - I

Introduction to marketing management: What is unrelating, the core concept, need, wants, demands, product, value cost and its functions.

Marketing management: Production concept, product concept and selling, marketing concept, role of marketing in modern organization, marketing philosophies.

Module - H

The nature of high performance business: Corporate and division strategic planning, business strategic planning, marketing process, analyzing consumer markets and buying behaviour.

Module - III

The product life cycle: Conditions and strategies in different phases, marketing strategies through PLC.

New product decisions: Definitions and factors contributing to new production development, new product development process.

Module - IV

Program Revision

Guru Ghasidas Vishwavidyalaya Metalleish kildeliy teletal kissis ki 2015. 3 d 201 Koni, Bilaspur – 495009 (C.G.)

DEPARTMENT OF INDUSTRIAL & PRODUCTION ENGINEERING, GGV, BILASPUR CG

Deciding on the marketing program: Product, promotion, pricing, place (distribution channel), managing advertising, sales promotion, public relation, developing and managing development program, sales promotion and public relation.

Module -- V

Managing retailing whole selling and logistic: Types of retailers and levels of services, trends in retailing, types of whole selling, market logistics.

The role of marketing communication: Communication process model and developing effective acommunication, characteristics of marketing communication mix, factors in setting the communication mix.

TEXT & REFERENCE BOOKS:

						CT-1	CT-2		TOTAL	
B.Tech III Seni	IP03TPC05	Moterial Science	3	-2	1	15	15	70	100	3

COURSE OBJECTIVES:

 Understanding of the correlation between the internal structure of materials, their mechanical properties and various methods to quantify their mechanical integrity and failure criteria.

- 2. To provide a detailed interpretation of equilibrium phase diagrams.
- 3. Learning about different phases and hear treatment methods to tailor the properties of Fe-C alloys:

COURSE OUTCOMES:

After completion of the course, the students will be able to

CO1: Identify crystal structures for various materials and understand the defects in such structures.

CO2: Understand how to tailor material properties of ferrous and non-ferrous alloys.

CO3: Quantify mechanical integrity and failure in materials.

COURSE CONTENT:

Module - I

Crystal Structure: Unit cells, metallic crystal structures, ceranics. Inperfection in solids: point, line, interfacial and volume defects, dislocation strengthening mechanisms and slip systems, critically resolved shear.

Module - II

Mechanical property measurement: Tensile, compression and torsion tests. Young's modulus, relations between true and engineering stress-strain curves, generalized Blooke's law, yielding and yield strength, ductility, realience, tonghness and elastic recovery.

Hardness: Rockwell, Brinell and Vickers and their relation to strength-

Module - III

Static failure theories: Ductile and brittle failure mechanisms, Tresca, Von-mises, maximum normal stress, Molu-Coulomb and medified Molu-Coulomb

6

Guru Ghasidas Vishwavidyalaya Matallasah kikisih telatri kisain kembada 1995 Koni, Bilaspur – 495009 (C.G.)

DEPARTMENT OF INDUSTRIAL & PRODUCTION ENGINEERING, GGV, BILASPUR CG

Fracture mechanics: Introduction to stress intensity factor approach and Griffith criterion. Fatigue failure: High cycle fatigue, stress-life approach, SN enve, endorance and fatigue limits, effects of mean stress using the modified Goodman diagram, fracture with fatigue.

Module = IV

Introduction to non-destructive testing (NDT) alloys, substitutional and interstitial solid solutions. Phase diagrams: interpretation of binary phase diagrams and microstructure development, entertic, perifectic, perifected and monotectic reactions. Iron, iron-carbide phase diagram and microstructural aspects of ledeburile, anstenite, ferrite and computite, cast iron.

Module - V

Heat treatment of Steel: Annealing, tempering, normalising and spheroidising, isothermal transformation diagrams for Fo-C alloys and microstructure development. Continuous cooling curves and interpretation of final microstructures and properties, anstempering, martempering, case hardening, carburizing, nitriding, cyuniding, carbo-nitriding, flame and induction herdening, vacuum and plasma hardening alloying of steel.

Properties of stainless steel and tool steels, maraging steels, cast irons, grey, white, malleable and spheroidal cast irons, copper and copper alloys, brass, bronze and copro-nickel, aluminium and Al-Cu-Mg alloys, nickel based super alloys and titanium alloys.

DEPARTMENT OF INDISTRIAL & PRODUCTION ENGINEERING, GOV, BILASPUR CG

Guru Ghasidas Vishwavidyalaya Matiliani kilikeli teleni kesis kulti 5.3420 Koni, Bilaspur – 495009 (C.G.)

DEPARTMENT OF INDUSTRIAL & PRODUCTION ENGINEERING, GGV, BILASPUR CG

and real fluid flow, one, two and three dimensional flows. Stream line, path line, streak line and stream tabe, stream function, velocity potential function. One, two and three – dimensional continuity equations in cartesian coordinates.

Module - III

Fluid Dynamics: Surface and body forces, equations of motion, Euler's equation, Bernoulli's equation, derivation, energy principle, practical applications of Bernoulli's equation, Venturimeter, Orifice meter and Pitet tube, momentum principle, forces exerted by fluid flow on pipe bend, vortex flow: free and forced.

Module - IV

Dimensional analysis and dynamic similitude: Definitions of Reynolds number, Froude number, Mach number, Weber number and Euler number, Rayleigh's method, Buckingham's n-theorem. Model studies: similitude, dimensionless number and its significance.

Module - V

Laminar Flows Reynold's experiment, flow of viscous fluids in circular pipe, shear stress and pressure gradient relationship, velocity distribution, Hagen-Poisenille equation, flow of viscous fluids between two parallel plates (Courte flow), shear stress and pressure gradient relationship, velocity distribution, drop of pressure head.

Turbulent Flow: Effect of turbulence, expression for loss of head due to friction in pipes (Darcy-Weisbach equation) and expression for co-efficient of friction in terms of shear stress.

Flow through pipe: Loss of energy in pipes, Hydraulic gradient and total energy line, pipe in series and parallel, equivalent pipe power transmission through pipe, water hammer in pipes.

						CI-I	CT-2		TOLAL	
B Tech IV Sem	B041PC07	Manufacturing Processes - II	3	-	-	-15	15.5	70	100	3

COURSE OBJECTIVES:

 To motivate and challenge students to understand and develop an appreciation of the processes in correlation with material properties which change the shape, size and form of the raw materials into the desirable product by conventional machining methods.

- 2. To study the fundamentals of various metal removal processes by multi point enting tools.
- 3. Methods of machining/ manufacture of gears used in power transmission:
- Characteristics of various machine tools and to familiarize with the different types of machine tool drives.
- Train is knowing the fundamental parts of various machine tools and their kinematic schemes.

COURSE OUTCOMES:

After completion of the course, the students will be able to

- CO1: Understand the different conventional machining methods employed for making different products
- CO2: Select a machining operation and corresponding machine tool for a specific application in real time.

CO3: Identify basic parts and operations of machine tools including lathe, shaper, planer, drilling, boring, milling and broaching machine.

COURSE CONTENT:

Module - 1

Sheet metal working: Role of sheet metal components, cutting mechanism, description of exiting processes like blanking, piercing, lancing etc., description of processes like deep drawing, bending, coming, embossing etc., basic elements of presses for sheet metal working, punch and die elements, die elements.

Module - II

Lather Lathe design and terminology specification, types of lathe: center lathe, capstan and turret lathe, various operations performed on lathe, operating conditions calculation of unternal removal rate.

Drilling: Fundamental of drilling process, types of drilling machine, types of drills, geometry of twist drill, and various operations performed on drilling machine.

Boring: Introduction to boring, reaming, tapping and taps, other hole making operations.

^{30.}

DEPARTMENT OF INDUSTRIAL & PRODUCTION ENGINEERING, GGV, BILASPUR CG

Module - III

Milling: Milling machine, milling entrers, milling process: up milling, down milling, different type of milling operation: end milling, plain milling, side and face milling, work holding devices for milling, indexing and types, operating condition, calculation of material pemoval rate.

Broaching: Introduction to broaching, fundamental of broaching, broaching machine

Module - IV

Shaping: Introduction to shaping, shaping operation, types of shaping machine, mechanism of quick return motion, operating conductions, calculation of material removal rate.

Planning: Introduction to planning, planning operation, types of planning machine, operating conditions, calculation of material removal rate.

Module - V

Gear Manufacturing: Introduction to gear cutting, gear types, gear manufacturing processes: gear forming, gear shaping, gear planning, gear holiding etc. gear finishing, gear inspection.

Plastic Working: Plastic processing, mjection, compression & blow moulding, plastic design principles processes, machines and optipments, parameters and force calculations.

I The course is introduced to develop one's outer and inner personality tremendously and enrich the abilities to enable one to meet the challenges associated with different job levels.

2. Personality development is essential for overall development of an individual apart from gaming technical knowledge in the subject.

COURSE OUTCOMES:

After completion of the course, the students will be able to

- CO1: To provide the concept of personality and image
- CO2: Develop leadership, listening and interacting skills.
- CO3: Develop attitudinal changes.

CO4: Develop decision-making qualities and communication skill.

COURSE CONTENT:

Module - I

Business communication: Role of communication in information age, concept and meaning of communication, skills necessary for technical communication, communications in a technical organization, burriers to the process of communication and sola.

Module - II.

Style and organization in technical communication: Listening, speaking, reading and writing as skills, objectivity, clarity, precision as defining features of technical communication, various types of business writing: letters, reports, notes, memos, language and format of various types of business letters, language and style of reports, report writing strategies, analysis of a sample report.

Module - HI

Communication and personality development: Psychological aspects of communication, cognition as a part of communication, emotional intelligence, politeness and etiquette in communication, endtural factors that influence communication, mannerisms to be avoided in communication, language and persuasion, language and conflict resolution.

Guru Ghasidas Vishwavidyalaya Matallasah kikisih telatri kestis kemi 5 ditti Koni, Bilaspur – 495009 (C.G.)

DEPARTMENT OF INDUSTRIAL & PRODUCTION ENGINEERING, GGV, BILASPUR CG

Module - IV

Language Inhoratory: Emphasizing listening and comprehension skills, reading skills, sound structure of English and intonation patterns.

Module - V

Oral presentation and professional speaking: Basics of English promuciation, elements of effective presentation, body language and use of voice during presentation, connecting with the audience during presentation, projecting a positive image while speaking, planning and preparing a model presentation, organizing the presentation to suit the audience and context, basics of public speaking, preparing for a speech.

B.TechIV Sett.	BOITHS022	Occupational Health and Safety	3	÷		ы	15	.70	100	3

COURSE OBJECTIVES:

 The objective of the study this course is to acquire the knowledge, skills, and judgement to function as an entry-level practitioner in occupational health and safety.

 A contribution towards the development and maintenance of a healthy and safety working environment.

COURSE OUTCOMES:

After completion of the course, the students will be able to

- CO1: Interpret and apply legislative requirements, industry standards and best practices in a variety of surriplaces.
- CO2: Apply risk management principles to anticipate, identify, evaluate and control physical, chemical, biological and psychosocial hazards.
- CO3: Design, support, and evaluate health and safety programs and implement procedures using project management principles and processes appropriate to the task.
- CO4: Set and achieve work priorities and goals individually and as a team member.
- CO5: Use a mage of effective communication skills and methods to clearly and briefly convey regulatory and technical information and data to designated andiences.

COURSE CONTENT:

Module - I

Introduction: Environmental law: legal control of hazardous substances and processes, environmental issues and judicial trends, health and safety law, common liabilities and work place injuries, health and safety at work, the principle legal requirements, health, safety and industrial relation law.

Module - II

Health and safety management: Safety management and policy, investigation reporting and recording of accidents, health and safety monitoring, comprehensive exposure assessment, principles of evaluating workers exposure, risk assessment in the work place, major incidents and procedures, health and safety training and communication, the cost of accidents. Principles of accident prevention, safe system of work, surveys and audits.

Module - III

Occupational health and hygiene: The organization of working environment, temperature, lighting and ventilation, welfare amenity provision, cleaning and hygiene. Toxicology and health, occupational disease and conditions, occupational audiometry, nihl, cardiovascular disease, physiological and psychological parameters. Occupational health practice, noise and vibration, dust and fames, adiation and radiological protection, personal protection, occupational hygiene practice, prevention and control strategies in occupational hygiene, manual handling, first aid, human factor and safety, stress, safety technology.

Module - IV

Assessment of Exposure: Measurement of noise and vibration exposure. Noise, vibration and control, heat stress monitoring, dust exposure and respiratory health. Work posture, nusculo skeletal disorders, strain index, lifting equation, maximum acceptable weight limits, occupational audiometry. Cardiovascular health, occupational determinants of beart rate variability, pulmonary functions and respiratory health, government schemes and norms related to health and nourishment, policies of government in special context to Chloritisgarh state.

DEPARTMENT OF INDUSTRIAL & PRODUCTION ENGINEERING, GGV, BILASPUR CG

 To achieve and maintain optimum energy procurement and utilization throughout the organization and to minimize energy cests/waste without affecting production and quality. To minimize environmental effects.

COURSE OUTCOMES:

After completion of the course, the students will be able to

- CO1: Develop their understanding of the technologies involved in energy production and their importance to climate change in relation to energy policies.
- CO2: Analyse the roles of renewable energy systems such as wind, wave, tidal, solar and biofizels.

COURSE CONTENT:

Module - I

Basic concepts of energy: Theoretical bestment of energy, laws of thermodynamics, Carnot efficiency, energy quality and energy budget. Energy balance of earth: studight electromagnetic spectrum, major flows in global hydrological cycle, ocean currents and heat flux, atmospheric curvulation, earth's energy budget. Module – II

Energy resources: Non-renewable energy resources, fossil faels origin, development of coal fixed power plants, cleaner coal combustion, origin and reserves of petroleum and natural gas, composition and classification of petroleum, petroleum refining. Environmental problems associated with petroleum.

Module - HI

Renewable energy resources: New developing renewable energy sources, nuclear fusion reactors, fusion power and the environment, Solar energy – collection and storage – present scenario in India, Wind energy and management, Tidal energy and management, Geothermal energy, Bio–gas plants and energy management.

Module - IV

Importance of management of energy sources: Management of fossil fael sources, oil crisis and economic development, OPEC Market behaviour, management of oil and natural gas, extraction and processing, management strategies of renewable energy sources.

DEPARTMENT OF INDUSTRIAL & PRODUCTION ENGINEERING, GOV, BILASPUR CG

COURSE OBJECTIVES:

- To establish the acientific and regulatory basis of graphical representation in the general context of Industrial Engineering, as a means of expression and communication for the design, creation.
- Development of an industrial installation and/or product making practical use of the current technological means available, consistent with the scientific teaching framework and in response to technological evolution.

COURSE OUTCOMES:

After completion of the course, the students will be able to

- CO1: Use their capacity of vision to interpret and/or convey the technical information in an industrial drawing.
- CO2. Know and apply graphical representation techniques using traditional metric geometry and descriptive geometry methods.
- CO3 Know, identify, interpret and apply the current standards on Industrial Technical Drawing. Computer aided design applications that allow students to elaborate and use graphical and technical information.

LIST OF EXPERIMENTS:

- 1. Introduction to CAD (layout and sketching, elements of drawing, draw commands).
- 2. Understanding the 3D function / tool bars in CAD software.
- 3. How to draw sketch for 3D modelling.
- 4. 3D modelling of different components using CAD software.
- 5. Drawings of different components using CAD software.
- Surface modelling of different mechanical components in CAD software.
- Presenting different orthographic isometric views of 3D models in CAD.
- 8. Assembly of different mechanical component.

B TechIV Sem	IP04PPC04	Fluid Mechanics Lab		-	3	30	20	50	1

COURSE OBJECTIVES:

- 1. To provide practical knowledge in ventication of principles of fluid flow
- 2. To impurt knowledge in measuring personne, discharge and velocity of third flow
- 3. To understand Major and Minor Losses

COURSE OUTCOMES:

After completion of the course, the students will be able to

- CO1: Calculate performance analysis in turbines and pumps and can be used in power plants
- CO2: Analyze practical problems in all power plants and chemical industries
- CO3: Conduct experiments (in teams) in pipe flows and open-channel flows and interpreting data from model studies to prototype cases, as well as documenting them in engineering reports
- CO4: Analyze a variety of practical fluid-flow devices and utilize fluid mechanics principles in deugo
- CO5: Select the proper pump to optimize the pumping efficiency.
- CO6: Use modern computational techniques in fluid dynamics.

LIST OF EXPERIMENT:

- 1. Measurement of viscouty
- Study of Pressure Measuring Devices.
- 3. Stability of Floating Body.
- 4. Hydrostatics Force on Flat Surfaces Curved Surfaces.
- Verification of Bernoulli's Theorem.
- 6. Venturimeter.
- T- Orifice meter.
- Impacts of jets.
- 9. Flow Visualization -Ideal Flow.
- 10. Length of establishment of flow.
- 11. Velocity distribution in piper.

Guru Ghasidas Vishwavidyalaya Matiliani kikisi kikisi kami kiratis kami Koni, Bilaspur – 495009 (C.G.)

DEPARTMENT OF INDUSTRIAL & PRODUCTION ENGINEERING, GGV, BILASPUR CE

Course			PERIODS			EVA				
Name & Semester	Course No.	SUBJECT	L	T	P		RNAL SMENT	ESE	SUB- TOTAL	CREDITS
B Tech V Sem	IPOSTIPCOS	Design of Machine Elements	3	1	-	15	15	70	109	4

COURSE LEARNING OBJECTIVES:

- 1. To familiarize the various steps involved in the design process.
- 2. To evaluate the shape and dimensions of a component by considering various principles.
- 3. To satisfy functional and strength requirements.
- 4. To learn to use standard practices, catalogues, standard data and standard machine components:
- To develop an ability to use the techniques, skills, and modern engineering tools necessary for engineering practice.
- 6. To develop an ability to identify, formulate, and solve engineering problems.

COURSE OUTCOMES:

After completion of the course, student will be able to

- CO1: Describe the design process, material selection, calculation of stresses and selection of theory of failure.
- CO2: Design the solid, hollow shafts and to finding the critical conditions and effective use of key in shaft.
- CO3: Analyze riveted and bolted joints in eccentric leading.
- CO4: Example the welded joints for structural applications.
- CO5: Demonstrate knowledge on brakes, clutches and belt-drive used in different application under static loading.
- CO6: Analyze the bending and wear conditions in spir year and knowledge to summarize the failure criteria.

COURSE CONTENT:

Module - 1

Basic design concepts and design against static loading: Objective and scope of mechanical engineering design, design considerations, review and selection of materials and manufacturing processes, codes and standards, modes of failure, design/allowable stress, factor of safety (FoS), theories of failure – maximum normal stress theory, maximum shear stress theory, distortion energy theory, choice of failure criteria.

Module - II

Design of shafts and keys: Shaft subjected to twisting moment, bending moment, combined twisting moment and bending moment, fluctuating loads, design of shaft on the basis of rigidity. Flat and separe keys, woodcuff keys.

Guru Ghasidas Vishwavidyalaya Matiliani kilikili telan kesisis (2016, 5420) Koni, Bilaspur – 495009 (C.G.)

DEPARTMENT OF INDUSTRIAL & PRODUCTION ENGINEERING, GGV, BILASPUR CE

Module - III

Design of riveted, bolted and welded joints: Failure of riveted join, strength and efficiency of riveted joint, eccentrically loaded riveted joint. Bolted joint in tension, tongae requirement for bolt tightening, bolted joint under fluctuating load. Eccentrically loaded joint in shear, bolted joint with combined stresses. Stresses in butt and fillet welds, strength of welded joints, eccentrically loaded joint, welding joint subjected to Bending moment.

Module - IV

Design of clutches and brakes: Friction clutches, fliction materials, torque transmitting capacity, single & unitiple plate clutches, centrifugal clutches. Band and block brakes.

Design of belt drive: Flat and V-belts, belt constructions, geometrical relationships for length of the belt, analysis of belt tensions, condition for maximum power.

Module - V

Design of spur gears: Spur gears, gear drives, classification of gears, selection of type of gears, law of gearing, force analysis, gear tooth fulnees, selection of material, number of teeth, face width, beam strength of gear tooth, effective load on gear tooth, estimation of module based on wear strength. Lewis equation.

Guru Ghasidas Vishwavidyalaya Matultioniylatilahiy telatri kiratis kemi keratis Koni, Bilaspur – 495009 (C.G.)

DEPARTMENT OF INDUSTRIAL & PRODUCTION ENGINEERING, GGV, BILASPUR CE

Course			PERIODS			EV/				
Name & Semester	Course No.	SUBJECT	L	I	P		RNAL SMENT	ESE	SUB- TOTAL	CREDITS
B Tech V.Sem	IP05TPC09	Mend Cutting	3	S.	÷	15	15	70	100	3

COURSE OBJECTIVES:

- 1. To study the basics of metal machining and mechanics of metal machining
- 2. To study the different cutting tool materials and types & geometry of cutting tools.
- 3. To learn introductory concepts of various advanced machining processes
- To study various super finishing processes.

COURSE OUTCOMES:

After completion of the course, the students will be able to:

CO1: The students have learned the basics of metal machining

CO2: Understand and apply the principles of mechanics to metal cutting process and develop analytical relation between input and output process parameters.

CO3 Understand, analyze and apply the concept of shear deformation of materials in metal cutting.

CO-CU-derstand the models of the machining economies and optimization, tool wear and its measurement.

CO5: Apply the fundamentals of abrasive machining to develop theoretical relations for different types of grinding and homing operations

CO6: The students have also studied the introductory concepts of various advanced machining processes. COURSE CONTENTS:

Module -1

Introduction: Definition and classification of metal cutting and tools, geometry of single point and multipoint cutting tool, various angles of cutting tool and their functions, factors affecting tool geometry, orthogonal and oblique cutting cutting tool signature, types of chips, their formation and factors. Merchant's force diagram.

Mechanism of chip formation: Forces on the chips, methods of chip breaking, Design principal of simple step type chip breaker, working principle of chip breakers, effect of chip breaking. Merchant theory and other theories of metal cutting, stresses and strain in chips, shear and strain rate, Power and energy calculation.

Module -II

Heat generation and cutting temperature in machining. Causes and sources of heat in cutting, heat distribution, their measurement, tool dynamometer and their types and working.

Guru Ghasidas Vishwavidyalaya Matiliani kilikeli teletti kestis k 2015. 3 d201 Koni, Bilaspur – 495009 (C.G.)

DEPARTMENT OF INDUSTRIAL & PRODUCTION ENGINEERING, GGV, BILASPUR (5)

Tool failures and tool life, mechanism of tool failure, types of tool failure, tool wear and types, Taylors tool life Equations, relationship between tool life, cutting speed, feed, depth of cut, factors affecting tool life.

Machinability -Definitions, evaluations, factors affecting machinability, machinability index.

Module - III

Cutting fluids- functions characteristics and types of cutting fluids and their application, criteria for selection of cutting fluids'

Cutting tool materials- requirements, types and characteristics of various cutting tool materials, comparison and selections of cutting tool.

Economics of machining - cost analysis and optimization of machining, various parameters for calculation of machining cost'

Module - IV

Grinding: Mechanics of grinding, cutting action, grit, Gmin, Structure, Grinding Wheel Specification, Wheel Lafe, Balancing, Touing and Doessing of Wheels, Classifications of Abrasive Grinding Processes: wheel wear, mechanics of lapping and houing, Polishing and Buffing Chipping action in grinding. Module - V

Unconventional Machining Processes: Electrical Discharge Machining, principle and processes parameters, MRR, surface finish, tool war, dielectric, power and control circuits.

Electro-chemical nuchining (ECM), process parameters, MRR and surface finish.

Abrasive jet machining and ultrasenic machining working principles and process parameters:

Mechanism of material removal, tooling and equipment, process parameter, surface finishing obtained by Laser beam machining (LBM) and Election beam machining.

TEXT & REFERENCE BOOKS:

Course	Course No.			RIO	DS.	EVA				
Name & Semester		SUBJECT	1.	I	P		RNAL SMENT CT-II	ESE	SUB- TOTAL	CREDITS
B.Tech. V.Sem	IP05TPC10	Statistical Quality Control	3	0	•	13	15	70	100	3

COURSE LEARNING OBJECTIVES:

- Define and understand various terms associated with quality control.
- 2. Enhance the students understanding of the complexity of statistical analysis and interpretation:
- Provide an introduction to the fundamental concept of SPC, total quality management, six signal, quality function deployment and applications of these concepts.
- Analyze the philosophies of TQM in order to better evaluate the TQM implementation proposals.
- Assess exactly where an organization stands on quality management with respect to 150 9000 quality management.

COURSE OUTCOMES:

After completion of the course, student will be able to

- COI: Explain the importance of quality & role of statistical quality control.
- CO2: Apply methods and techniques of statistical quality control, to studies and interpret the sesuits in business.
- CO3: Demonstrate motivation and responsibility to advocate for quality in business.
- CO4: Develop quality management philosophies and frameworks.
- CO5: Develop in-depth knowledge on various tools and techniques of quality management.
- COURSE CONTENT:

Module - I

Basic concepts of quality: Impection definition of quality, quality control cost of quality, value of quality, statistical quality control, need and advantages of SQC

Frequency distribution: Variables & attributes, quality characteristics, theory of control charts, control chart for variable X & R chart, control chart for attribution P. NP, C, chart & process capability.

Module - II

Quality assurance: Quality assurance manual, quality circle, characteristics of quality circle and the process of operation of quality circle, quality policy & proceeding & objectives,

Acceptances sampling Concept of sampling, O-C curve & its construction, sampling plans, single, doubles & multiple sampling plans.

Guru Ghasidas Vishwavidyalaya Matallorah kilikirih telani kesini kemi 5 di 201 Koni, Bilaspur – 495009 (C.G.)

DEPARTMENT OF INDUSTRIAL & PRODUCTION ENGINEERING, GGV, BILASPUR CE

Module - III

Contribution of various quality management gurus: Jarantinology, Deming's 14 Points, P-D-C-A wheel, Tagachi's philosophy, design of experiment, old and new seven QC tool of quality, Philip Crosby's zero defect, seven types of waste, 5's, quality function deployment.

Module - IV

Introduction to ISO 9000: Various models of ISO 9000, clauses of 9000, total quality control, total quality management, tool for TQC & TQM, Knizen, 6 sigma quality, procedure of six sigma; TQM and Six Sigma.

Module - V.

Reliability: Definitions, hefatub curve, design for reliability, failures & causes of failures, FMECA, maintainability & availability, MTBF, reliability models, system with components is series & in parallel, mixed arrangement, fault-tree-technique

TEXT & REFERENCE BOOKS:

- 1. Statistical Quality Control-- Grant & Leowowworth, Tata Mc. Hill.
- 2. Quality Planning & Analysis-Juran&Gryana, Tata Mc. Hill.
- 3. Total Quality Control A. Feigenbaum, Megraw Hill.
- 4. Statistical Quality Control-M. Mahajan, DhanpatRaiPublication.
- 5. Total Quality Management Besterfield, Tata Mc. Hill.
- 6. Total Quality Management PumimaCharantimath , Low Peanou Education.
- Total Quality Management Krishnaiya, PHI.
- 8. Total Quality Management Suganflick Semuel, PHI.

Guru Ghasidas Vishwavidyalaya Matallorah kikishi telan kesin kemi 5 dan Koni, Bilaspur – 495009 (C.G.)

DEPARTMENT OF INDUSTRIAL & PRODUCTION ENGINEERING, GGV, BILASPUR CE

Course			PERIODS			EV				
Name & Semester	Course No.	SUBJECT	L	T	P		RNAL SMENT CT-II	ESE	SUB- TOTAL	CREDITS
B Tech. V Sem	IPOSTPET1	hidental Engineering	3	÷		15	15	70	190	3

COURSE OBJECTIVES:

- To impart capability of successifiely planning, controlling, and implementing projects.
- To apply the principles of engineering science, maths, technology and lannan engineering, involving industry-relevant problems.
- To contribute to the profitable growth of industrial economic sectors by using IE analytical tools, effective computational approaches and systems thinking methodologies.
- To recognize the tools of efficiency, effectiveness and productivity for the resources of the plant and facility.
- To implement the policy of wage administrations for making the labour more and higher productive in their work.

COURSE OUTCOMES:

After completion of the course, student will be able to

CO1: Ability to apply mathematics and science in Industrial engineering.

CO2: Ability to design and conduct experiments, as well as to analyse and interpret data.

CO3: Ability to identify, formulate and solve engineering problems.

CO4 Ability to use the techniques, skills, and modern engineering tools necessary for industrial engineering practice

COURSE CONTENT:

Module-I

Introduction: History & development of industrial engineering. Productivity, means of increasing productivity, work study, productivity and work study, human factor in the fabrication, work of F. W. Taylor, Frank and Lillian Gilberth and their contribution.

Module-II

Method study: Definition & basic procedure, selection of jobs Recording technique: micro-motion study, Therbiligs, cyclograph, chronocyclograph, principle of motion economy, design of work place layout, analysts in the form of chart, operation chart, flow process chart, flow diagram, string diagram, man machine chart, two hand chart, Simo chart.

Guru Ghasidas Vishwavidyalaya Matiliani kilikeli teletti kestis k 2015. 3 d201 Koni, Bilaspur – 495009 (C.G.)

DEPARTMENT OF INDUSTRIAL & PRODUCTION ENGINEERING, GGV, BILASPUR CE

Module-III

Work measurement: Definition, objectives, application, number of cycles to be timed, time study equipment, performance rating, allowance, hunder of cycle to be studied, determination of standard time, predetermined motion time system, conducting work sampling study & establishing standard time. Module-IV

Wages & Incentives: Characteristics of a good wage or incentive system, method of wage payment, concept of wage & incentive schemes, financial and non-financial: Taylor's differential piece rate, Halsey premium plane, Merric's multiple piece rate system, group incentive scheme.

Ergonomics: Work space dimension, design of work place, environmental stresses & impacts on human work.

Module-V

Value engineering: Introduction, concept of value, value analysis approaches, job plan, value tests. Industrial safety: Analysis of cost of accident, hazards in various fields like fire, electrical shocks, chemical, organization for safety, plant safety, govt, legislation for safety safety rales.

TEXT & REFERENCE BOOKS:

- 1. Introduction to work study-IL.O, Oxford Press.
- 2. Motion and time study -- Mandel, Prentices Hall India.
- 3. Motion and Time Study- Ralph M Barnes, John Wiley and sons.
- 4. Industrial Engineering M. I. Khan, New Age International Publication.

DEPARTMENT OF INDUSTRIAL & PRODUCTION ENGINEERING, GGV, BILASPUR CE

Course		A CONTRACTOR OF	71	PERIODS EVALUATION SCHEME			IEME			
Name & Semester	Course No.	SUMECT	I.	T	P		RNAL SMENT	ESE	SUB- TOTAL	CREDITS
B Tech. V Sem	IP05TPE12	Work Study and Ergenomics	3	2		-15	15	70	190	3

COURSE OBJECTIVES:

- 1 To provide the knowledge of interaction of man, machine and integration of their tools.
- To apply the principles of math, science, technology and engineering, involving industry-relevant problems.
- 3. To provide the comfort about in working environment of allthe employee, labour.
- 4. To apply the concept in the examination of human and work in all their contexts.

COURSE OUTCOMES:

After completion of the course, student will be able to

CO1: Ability to design and conduct experiments, as well as to analyse and interpret data.

CO2: Ability to identify, formulate and solve engineering problems.

- CO3 Ability to use the techniques, skills, and modern engineering tools necessary for work study practice.
- CO4: Assess the effect of physical environment factors on comfort and performance.

COS: Explain the influence of ergonomic principles on work organization and enhance

Module - 1

Introduction to man machine systems and ergonomics, human factors in design and engineering, needs of ergonomics and aesthetic design, physiological aspects of work.

Module - II

Work measurement through physiological tests, work physiology, paced and unpaced work performance, data logging, data collection, data reduction and analysis techniques, gross human anatomy, authropometry, bio mechanics, muscle strength and exertion potential of different limbs.

Module - III

Work capacity, environmental effects, exercises for evaluation of pastoral form and work spaces, environmental conditions including temperature, illumination, noise and vibration.

Module - IV

Perception and information processing, design of displays, hand control, typography, and teachability, layout and composition.

B.Tech. V Sem	IP05TPE13	Employee Relations	3		•	15	15	70	100	3

COURSE OBJECTIVES:

- To develop the knowledge on trade unions and its formation, structure, functions and legal framework.
- 2. To gain insight into the process of collective bargaining, its origin and development.
- To describe the activities, include annual employee reviews and the on-going development of employees through training and managerial guidance.

COURSE OUTCOMES:

After completion of the course, student will be able to

- CO1: Ability to describe and critique the concept of employee engagement.
- CO2: Ability to identify problems associated with both over-engagement and disengagement.
- CO3 Ability to examine the extent to which emotional and sesthetic labour are positioned in some contemporary organizations.
- CO4: Ability to critically evaluate the measurement of employee engagement.
- CO5: Ability to align organizational and employee objectives for improved organizational effectiveness. Module - 1

Conceptual framework of employment relations: Concept, scope and approaches to industrial relations, evolution of industrial relations and current developments, constitutional and legal framework of industrial relations: conventions, id act, made union act.

Module - II

Trade unionism: Trade union development and functions, trade union structure and recognition, managing trade unions, managerial unionism, employers' organisations.

Module - III

Collective hargaining: Nature and content of collective bargaining, negotiation skills, issues and mends in collective bargaining.

Module - IV

Employee involvement: Evolution, structure and process, design and dynamics of participative forums, strategies for implementing participation.

Guru Ghasidas Vishwavidyalaya Matallasah kikish kilan kisain keminika 1999 Koni, Bilaspur – 495009 (C.G.)

DEPARTMENT OF INDUSTRIAL & PRODUCTION ENGINEERING, GGV, BILASPUR CE

Module - V

Grievance handling and discipline: Grievance function in industrial relations, conciliation, arbitration and adjudication, discipline in industry.

TEXT & REFERENCE BOOKS:

B.Tech. V.Smi	IP05TPE21	MEMS and Nanotechnology	3	÷	10	13	15	70	100	10

COURSE OBJECTIVES:

To explain students to basic concepts of nano devices and various sensors.

2. To provide knowledge about the applications of unnotechnology

COURSE OUTCOMES:

The after completion of the course the student will be able to

CO1: Understand the working of MEMS and NEMS

CO2: Understand the applications of nano sensors and detectors

COURSE CONTENT:

Module - 3

Introduction of mems, naicro sensor, micro actuators, microelectronic fabrications, mechanical thermal and megnetic mems, RF mems, MOEMS, ments design consideration.

Micromachining, photolithography, structural and sacrificial materials, methods of lithography. Thin film deposition, and its developments process, LPCVD, PECVD, impurity doping, etching, problem with bulk micro machining, vapour bonding, LIGA.

Module - II

System modelling and properties of material: System types and basic modellingelements in mechanical thermal, fluid system. Translational and rotational pure mechanical system, hybrid system, analogy between mechanical and electrical system.

Passive components and systems: System on a chip, passive electronics system, passive mechanical system.

Module - III.

Mechanical sensors and actuators: Introduction, principals, micro plates, capacity impacts, piezoelectric materials, and their properties, memo gyroscope.

Thermal sensor and actuators: Introduction, thermocouple probe, micro hot plate gas sensors, memsthermo vessels, shape memory alloys.

Module - IV

Magnetic sensors and actuators: Different types and principals.

RF mems: introduction, RF based communication system, mems inductors, and tuner filter, Resonater.

Course Name & Semester	Course No.		PE	RIO	DS.	EV.	ALUATR	N SCI	BEME	
		SUBJECT	1.	T	P	a second second second	RNAL SMENT CT-II	ESE	SUB- TOTAL	CREDITS
B Tech V Sen.	1895TPE22	L.C. Engine	3			15	15	79	300	3

COURSE OBJECTIVES:

- To study classifications of internal combustion engine.
- 2. To understand how and why actual cycles deviate from air standard cycle and fuel-air cycle.
- To understand combustion in spark ignition engine and diesel engines.
- 4. To impart knowledge about carburction, gasoline injection and diesel injection.
- 5. To impart knowledge about ignition, cooling, labrication and governing systems.
- 6. To imput knowledge about various engine performance characteristics and its testing.

COURSE OUTCOME:

The after completion of the course the student will be able to

- CO1: Demonstrate a basic understanding of engine design, function and performance.
- CO2 Acquire knowledge and heads-on competence in the design and development of mechanical systems.
- CO3: Work effectively with engineering and science teams as well as with multidisciplinary designs.

CO4: Demonstrate an understanding of the relationships between the design of the internal combustion engine and environmental issues.

COURSE CONTENT:

Module - I

Introduction of internal combustion engines: Engine classification, Air standard cycles, Otto cycle, Diesel cycle, Dual cycle, comparison of Otto, Diesel, and Dual cycles. Stirling cycle, Ericsson cycles, two and four-stroke engines, SI and CI engines, valve timing diagram, fael air cycle, factors affecting it, actual cycle analysis, actual Cycle.

Module - II

SI Engines: Combustion in SI engine, flame speed, ignition delay, abnormal combustion and it's control, combustion chamber design for SI engines, Carborotion, mixture requirements, carboretor types, theory of carboretor, MPUI, Ignition system requirements, Magneto and battery ignition systems, Ignition timing and sparkplog, Electronic ignition, Sowenging in 2 Stroke engines, Supercharging and its effect.

Module - III

CI Engline: Combustion in CI engines, Ignition delay, Knock and its control, combustion chamber design of CI engines.

26.

Guru Ghasidas Vishwavidyalaya Matallorah kilikirih telani kesini kemi 5 di 201 Koni, Bilaspur – 495009 (C.G.)

DEPARTMENT OF INDUSTRIAL & PRODUCTION ENGINEERING, GGV, BILASPUR GE

Fuel injection in CI engines: Requirements, types of injection systems, fuel pumps, fuel injectors, injection timings.

Module - IV

Engine Cooling: Different cooling systems, Radiators, and cooling fans.

Lubrication Engine friction, Lubrication principle, type of Jubrication, Inbritation oils, emilience ventilation.

Fuels: Fuels for SI and CI engine, important qualities of SI and CI engine fuels, rating of SI engine and CI

engine fuels, dopes, additives, gaseous faels, LPG, CNG, Biogas, Producer gas, alternative faels for IC engines.

Module - V

Testing and Performance: Performance parameters, basic measurements, blow by measurement, testing of SI and CI engines.

Emission and Pollution: S. I. Engine and C. I. Engine enanious and its control and comparison. Effect of pollution on human health and tisophere:

TEXT & REFERENCE BOOKS:

B Tesh V Sen	IPOSTPE23	Mechanonics	3	1	2	15	15	70	100	4

COURSE OBJECTIVES:

- 1. To acquire the knowledge of basics of mechatronics and their scope.
- 2. To acquire the knowledge of sensors and transducers:
- 3. Analyse fundamental of hydrautic and electrical actuators.
- 4. To acquire the knowledge of data acquisition system and control system.
- 5. To develop the ability to analyse and design mechatronics system-

COURSE OUTCOMES:

The after completion of the course the student will be able to

- CO1: Apply knowledge of mechationics for understanding and solving engineering problems.
- CO2: Acquire knowledge and lands-on competence in applying the concepts of mechatronics in the design and development of mechanical systems.
- CO3: Demonstrate creativeness in designing new systems components and processes in the field of engineering in general and mechanical engineering in particular.
- CO4. Identify, analyse and solve mechanical engineering problems useful to the society-
- CO3. Work effectively with engineering and science teams as well as with unitidisciplinary designs. COURSE CONTENT:

Module -E

introduction to mechatronics: Sensors and actuators type, selection and interfacing, digital electronics and microprocessors in mechatronic systems, mechatronic systems modelling, analysis and control of analogue, digital and hybrid systems, mechatronic systems design principles.

Module II

Introduction to mechatronics systems: Measurement systems, control systems, mechatronics approach. Sensors and transducers: Introduction, performance, terminology, displacement, position and proximity, velocity and motion-fluid, pressure-temperature, sensors-light, sensors-selection of sensors -signal

processing. Module -III

Microprocessor: Introduction, architecture pin configuration, instruction set-programming of microprocessor using 8085, instructions interfacing input and output devices, interfacing d/a convertors and a/d convertor, applications, temperature control, steeper motor control, traffic light controller.

COURSE OBJECTIVES:

1. The objective of this course is to inform the students about the basic concepts of financial management and contemporary theory and policy in order to master the concepts, theories and technique of financial management, which represents the condition of profitable business operations and survival respectively in the development of business subjects and the economy as a whole.

2: Students should acquire the basic knowledge by means of combining theoretical cognitions and practical attitudes to enable them the understanding of financial problems in business practice after completed the vocational studies.

COURSE OUTCOMES:

After completion of the course, student will be able to

CO1: Start and manage new business.

CO2: Evaluate and memory short term and long-term investments.

CO3: Evaluate and monitor current asset.

COURSE CONTENT:

Module - I

Introduction: Scope and objective, organisation of finance function.

Time value risk and return and valuation of money: Valuation of long-term securities, various model of pricing.

Module -II

Statement of changes in financial position: Sources and uses of working capital, cash flow statement, balance sheet, profit loss account and its process.

Financial ratio analysis: Meaning, types, importance and limitations, calculation of various ratios.

Module -III

Capital hudgeting: Principals, techniques, various methods of capital hudgeting, concept and measurement of cost and capital, and various approaches for measurement of cost of capital and computation.

Analysis of risk and uncertainty: Various approaches for risk evaluation.

20

Guru Ghasidas Vishwavidyalaya Matallasah kikisih telam kessis ke2005.54200 Koni, Bilaspur – 495009 (C.G.)

DEPARTMENT OF INDUSTRIAL & PRODUCTION ENGINEERING, GGV, BILASPUR CE

Module -IV

Theory of working capital management: Concept and definition of gross, working capital and act working capital, trade-off between profitability and risk.

Module -V

Operating, financial and combined leverage: Introduction, definition and concept and various approaches.

TEXT & REFERENCE BOOKS:

- 1. Financial Management-Khan and Jain, TMGH.
- 2. Financial Management -Kuchhal, Vikas Publication.
- 3. Financial Management-Paresh Shah, Willey Infin Pvt. Ltd.

DEPARTMENT OF INDUSTRIAL & PRODUCTION ENGINEERING, GGV, BILASPUR CE

Course Name & Semistor	Course No.	Incorport	P 1	ERI DS		EV/	LUATH			
		SUBJECT	L	T	P	INTE ASSES CT-1		ESE	SUB- TOTAL	CREDITS
B.Tech V.Sen	IP09THIS42	Managerial Economics	3	4	-	15	15	70	100	3

COURSE OBJECTIVES:

 To prepare engineering student to analyse cost/sevensie data and carry out economic analyses in the decision making.

- 2. Justify the process or reject alternatives/projects on an economic basis.
- To prepare engineering students to function in the business and management side of professional engineering practice.

COURSE OUTCOME:

After completion of the course, student will be able to

- CO1:Be able to make intelligent comparisons of project alternatives during the planning and implementation phases.
- CO2 Be able to perform and evaluate present worth, future worth and annual worth analyses on one of more economic alternatives.
- CO3 Be able to perform and evaluate payback period and capitalized cost on one or more economic alternatives
- CO4: Be able to carry out and evaluate benefit/cost, life cycle and broskeven analyses on one or more economic alternatives

COURSE CONTENT:

Module 1

Introduction to managerial economics: Different area of managerial economics, micro and macroeconomics, nature and scope of managerial economics, demand analysis, law of demand and its exceptions, elasticity of demand definition, types, measurement and significance of elasticity of demand, supply analysis, law of supply, elasticity of supply: definition, types, measurement and significance of elasticity of supply.

Module-II

Law of return: Revenue analysis, theory of production and cost analysis: production function. Cobb-Danglas production function, ACMS production function, investment function.

Cost analysis: Cost concept, opportunity cost, fixed vs. variable cost, explicit costs vs. implicit costs, out of pocket costs vs. imputed costs, break-even analysis (BEA), determination of break-even point (simple problem), managerial significance and limitation of BEA.

DEPARTMENT OF INDUSTRIAL & PRODUCTION ENGINEERING, GGV, EILASPUR OF

Module-III

Introduction to market & pricing policies: Element of numket, types of numket, concept of numket, classification of market based on the nature of competition, types of competition, features of perfect competition, feature of imperfect competition, monopoly and monopolistic competition, price-output deterministion in case of perfect competition and monopoly.

Objectives and policies of pricing: Introduction, full cost or cost-plus pracing, differential pricing, going rate pricing, marginal cost pricing, trade association pricing, loss leadership pricing, administered pricing Module-IV

Forms of business organization: Introduction, definition, essential element of good organization, principles of organization, formal and informal organisation, organisation structure, concept of ownership organization, types of ownership, partnership, joint stock company, types of joint stock company, cooperative organization, public sector organisation.

Capital and capital budgeting: Capital and its classifications, need of working capital and its assessment, factors affecting working capital, fundamental of accounting. types of capital, method and sources of mising finance, nature and scope of capital budgeting, features of capital budgeting proposals, method of capital budgeting: psyback method, accounting rate of return (ARR) and net present value method (simple problems).

Module-V

Fundamental of financial accounting: Nature of accounting, important accounting terminology, accounts and types of accounts, rules of dobit and credit, system of book keeping, book of accounts, journal, ledger, trial balance, final account, trading account, profit and loss accounts and balance sheet. Financial analysis through ratios: Classification of financial ratios, liquidity ratios, leverage ratios, activity ratios, profitability ratios, current ratio, acid test ratio, debt equity ratio, assets coverage ratio, debt service coverage ratio, investory turnover ratio, debtor velocity ratio, creditor velocity ratio, gross profit ratio, net profit ratio, return on equity ratio.

Course Nome & Semester	Course No.			iri DS	0	. IN	ALUATH	IN SCI	IEME	
		SUBJECT	1.	T	P	ASSES	RNAL SMENT	ESE	SUB- TOTAL	CREDITS
						CI4	CT-B		1	
B Tech. V Sen.	IP05THS43	Financial Accounting and Costing	3	•	-	15	15	70	100	3

COURSE OBJECTIVES:

- 1. To ascertain the cost per unit of the different products manufactured by a business concern.
- 2. To provide a consex analysis of cost both by process or operations and by different elements of cost.
- 3. To disclose sources of wastage whether of material, time or expense or in the use of machinery.
- 4. Equipment and tools and to prepare such reports which may be necessary to control such wastage.
- To provide requisite data and serve as a guide for fixing prices of products manufactured or services rendered.

COURSE OUTCOMES:

After completion of the course, student will be able to

- CO1: Appreciate the need for negotiable instruments and procedure of accounting for bills henoured and dishonoured.
- CO2: Differentiate trade bills from accommodation bills.
- CO3 Understand the concept of consignment and learn the accounting treatment of the various aspects of consignment
- CO4: Distingaish joint venture and partnership and to learn the methods of maintaining records under joint venture
- CO5: Distinguish between single entry and double entry.
- CO6: Know the ascertaminent of profit under single entry system.
- CO7: Understand the meaning and features of non-profit organisations;

COURSE CONTENT:

Medule-1

Financial accounting: Introduction to book keeping, double-entry accounting, journal & ledger posting, financial statements &analysis, trial balance, preparation of trading and profit & loss account and balance sheet.

Module-II

24

Guru Ghasidas Vishwavidyalaya Metallershildeliyleleti birshild Mik. 5 (2011) Koni, Bilaspur – 495009 (C.G.)

DEPARTMENT OF INDUSTRIAL & PRODUCTION ENGINEERING, GGV, BILASPUR (E

Ratio analysis: Balance short ratios, current ratio, fixed asset ratio, liquidity ratio, capital gearing ratio, profit-loss account ratios, gross margin ratio, net margin ratio, combined ratios, return on investment ratio, net profit to total assets ratio, creditors turnover ratio.

Module-III

Costing: Objectives of costing, elements of costing, methods of costing, preparation of cost sheet, job costing, marginal costing, absorption costing, process costing and standard costing-material, labour, overhead cost variance, activity based costing and target costing, cost-profit-volume analysis and problems on cost-volume-profit analysis.

Module-IV

Working capital management: Introduction, concepts of working capital, operating and cash conversion cycle, permanent and variable working capital, balanced working capital position, determinants of working capital, estimating working capital needs, policies for financing current assets, issues in working capital management.

Module-V

Capital budgeting: Nature and scope of capital budgeting, features of capital budgeting, methods of capital budgeting, DCF, NON-DCF techniques, accounting rate of return, net present value, payback period, discounted payback period, profitability index.

TEXT & REFERENCE BOOKS:

	CORRENO.	SUBJECT	Ī.	I	P	INTERNAL ASSESSMENT		SUB- TOTAL	CREDITS
B Tech. V Sen.	INSPECOS	Metal Cutting Lab		-	2	30	-20	: 50	1

- COURSE OBJECTIVES:
- Operate machine tool equipment commonly found in industry like loth machine, milling machine and grinding machine.
- Manufacture parts from various materials in accordance with sp blueprints, electronic drawings and shop sketches.
- 3. Apply safety principles in a work environment to minimize hazards a to productivity

COURSE OUTCOMES:

After completion of the course, student will be able to

- CO1: Apply cutting mechanics to metal machining based on cutting force and power consumption.
- CO2: Operate lathe, milling machines, drill press, grinding machines, etc.
- CO3: Select cutting tool materials and tool geometries for different metals.

LIST OF EXPERIMENTS:

 Introduction of general purpose machine lath and drilling machine, shaping machine, milling and grinding machine.

- 2. Focing and plain turning on lathe machine-
- 3. V-groove cutting on shaping machine.
- 4. Step turning and taper turning on lathe machine.
- To perform the variace grinding operation.
- 6. Thread cutting and knowing on lathe mechine.
- 7. To verify the Merchant's force diagram-

COURSE OBJECTIVES:

- 1. To increase the self-confidence among students which helps in finding their own proficiency
- 2. To cultivate student's leadership ability and responsibility to perform and execute the given task.
- 3: To provide learners lands on practice within a real job situation.
- 4. Enhance and supplement the knowledge and skills of the students.

COURSE OUTCOMES:

After completion of the course, student will be able to

- CO1: Explain the role of self-efficacy, personal goals, and motivation in improving academic life.
- CO2: Describe the behaviours and characteristics of an effective learner.
- CO3: Ability to identify, formulate and model problems and find engineering solution based on a systems approach:

COURSE OBJECTIVES:

1. To learn about the importance of decision making.

To design and analyze mathematical statement and equations.

3. To grasp importance of Network analysis, transportation problems,

COURSE OUTCOMES:

After completion of the course, the students will be able to

CO1: Apply knowledge of optimization for formulating and engineering, decision problems in work culture

CO2: Work effectively with engineering departments:

CO3: Reflects towards resource optimization and allocation.

COURSE CONTENT:

Module 4

Introduction to linear programming. Graphically solution to linear programming problem, solving linear problem by simplex method, optimization problem, maximization & minimization function, with or without constraints, sack samplus & artificial, variable method, degeneracy problem.

Module-II

Mathematical statement of the transportation problem: Transportation model, method for basic feasible solution, Degeneracy & unbalance problem, Mathematical statement of the assignment problem, solution of assignment problem, traveling sales-man problem.

Module-III

Game theory: Rule of game, method of solving game, graphically & arithmetic, saddle point & without saddle point, dominance method, mixed strategies 2 X 2 game, 2 X N game, M X 2 game, 3 X 3 game (method of matrix's, method of linear programming etc).

Investory: Introduction, classification, function, level, control techniques, models, various costs associated, EOQ, optimum lot sizing.

Module-IV

Introduction of queuing theory: Elements of queuing system, operating characteristics of a queuing system, Poisson arrivals & exponential service time, waiting time & idle time cost, single channel queuing theory.

Guru Ghasidas Vishwavidyalaya Matallasah kikisih kisal kesis ki 2016. Balanj Koni, Bilaspur – 495009 (C.G.)

DEPARTMENT OF INDUSTRIAL & PRODUCTION ENGINEERING, GGV, BILASPUR CE

Replacement problems: Requirement policy, replacement of items, machinery various themes, group replacement policy, MAPI methods.

Module - V

Network analysis Introduction of PERT & CPM, computation of PERT, time estimation, measure of deviation & variation, probability of completing project, arrow diagram & critical path method, scheduling, cost analysis & crushing of network.

TEXT & REFERENCE BOOKS:

B Tech VI Sem	IPOSTPC12	Methology A: Menuemant	3	•	-	15	15	70	100	3

COURSE OBJECTIVES:

 To under standard, analyze the different measurement systems, Standards of Measurement, Measurement Errors.

- To know about Limits, Fits, tolerance and gauges used in measurement and designing aspects for these.
- 3. To familiar with different types of comparators, optical methology and their applications.
- 4. To enlighten students about various techniques of measurement of Screw flaunds, Gears, Geometric forms and Stafface textures.
- To accustom with various measuring devices for measurement of force, torque, strain, acceleration, online measurement and many-nano measurements.

COURSE OUTCOMES:

After completion of the course, the students will be able to

- CO1: Distinguish between accuracy and precision, identify different measurement errors, able to select linear or angular measuring instrument for measurement of various components
- CO2: Design limit gauges used for various components and purposes.
- CO3: Explain principles and uses of comparators and optical instruments used in metrology.
- CO4 Examine various screws threads and gears parameter using different methodology and explain capabilities of machining process by measuring surface finish.
- CO5: Implement and analyse appropriate measurement methods for variables like force, torque, strain, acceleration and online measurement and micro-nano measurements.

COURSE CONTENT:

Module-I

Introduction: Historical development, Basics of Metrology, Need for Inspection, Accuracy and Precision, characteristic of measurement devices, calibration, concept of error, sources of error, analysis of error, standards of measurements, system of measurement, line, end & wavelength standards.

Linear metrology: Steel rule, collipers, Vernier colliper, Vernier height gauge, Vernier depth gauge, micrometres, universal colliper.

Guru Ghasidas Vishwavidyalaya Matallorah kakkely telatal kerdis ke 2016. 3 d 2019 Koni, Bilaspur – 495009 (C.G.)

DEPARTMENT OF INDUSTRIAL & PRODUCTION ENGINEERING, GGV, BELASPUR CE

Miscellaneous measurements: Taper measurement, angle measurement, radius measurement, sine bor & Angle gauges

Module-II

Limit Fits and Gauge: Interchangeable manufacture, selective assembly, concept of limits, fits and tolerances, Types of fit, Basic-Hole System, Basic-Shaft System, Problems, Tolerance grades, Metric fits, Indian standard system, Types of gauges-plain plug gauge, ring gauge, snap gauge, limit gauge and gauge materials, Considerations of gauge design, Taylor's principle of gauging. Wear allowance on gauges

Module-III

Comparator and Optical gauges: Principle and uses of mechanical, optical, Electrical, electronic and presmatic Comparators

Principle of interferometer, concept of optical flat, projector, microscope, autocollimator and interferometer

Types of machine tool tests, alignment tests for lathe, milling and drilling machine tools

Module-IV

Form measurement: Terminology of screw threads, Measurement of minor, major, thread angle and effective diameter of screw threads by 2-wire and 3- wire methods, best size wire. Screw thread gauges, Tool maker's microscope.

Gen tooth terminology, gan tooth thickness & pitch measurement, involutes profile testing of gen

Straightness, flatness and squareness and circularity tests, numerical evaluation, measurement of surface finish, related instruments.

Automated inspection system. Introduction & applications of Co-ordinate Measuring Machine (CMM)

Module-V

Dynamic measurement: Sensors and Transducers: Types of Sensors, types of transducers and their characteristics

Force and Torque measurement: Direct methods and indirect method, force measuring instruments-load cells, Dynamometer, Power Measurements

Measurement of strain: types of strain gauges, gauge factors, theory of strain gauges and method of menomement, Whentstone bridge circuit

Vibration and Noise Measurement: Piezoelectric Accelerometer and decibel incless concept of co-line inspection & Micro-nano Measurement tools.

B.Tech VI Setti	1206119C13	Welding Engineering	3	4	43	15	15	70	100	3

COURSE OBJECTIVES:

 To imput knowledge about welding behaviour of machine and process during welding, analysis of common and newer welding techniques and metallurgical and weldability aspects of different common engineering metallol.

 To impurt knowledge on various advanced welding processes so that the students can apply them in origineering industry applications.

3. To develop the knowledge on the design of welded joints and the quality control of weldment.

COURSE OUTCOMES:

After completion of the course, the students will be able to

- CO1: The difference between various welding processes and its industrial utilization
- CO2: Apply the knowledge of solid state welding process for engineering applications.
- CO3: Understand the principles of radiant energy metal joining process.
- CO4: Understand the fundamental principles of special arc welding process
- CO5: Understand the knowledge of plasma arc in metal joining and cutting process
- CO6: Understand the knowledge of design principles in weld joints. Apply the concept of quality control and testing of weldment in influstrial environment.

COURSE CONTENTS

Module - 1

Welding: Classifications, principle and equipments of gas welding and Arc Welding, different type of welding process and their equipments, features, Welding symbols, Positions of welding, types of Gas welding Flames, Welding Techniques, Gas welding Torches Submerged Arc Welding, TKS, MIG, Plasma Arc Welding and its Application

Physics of welding: weldshility, weld thermal cycle, lient affected zone, Arc efficiency, temperature distribution in the arc; are forces, are blow, electrical characteristics of an arc, mechanism of arc initiation and maintenance, role of electrode polarity on arc behaviour and arc stability, analysis of the arc. Module - II

Are Welding: Are Welding Power Sources, Selection Factor for Power Sources, DC Generator, rectifiers, Constant Current & Constant Voltage Machines, welding Transformers, duty cycles

Guru Ghasidas Vishwavidyalaya Matiliani kiliani kilani kiratis ki 2015. Ba Koni, Bilaspur – 495009 (C.G.)

DEPARTMENT OF INDUSTRIAL & PRODUCTION ENGINEERING, GGV, BILASPUR CE

Welding Electrodes: Types, electrode costings and its importance, selection of electrode, electrode costing ingredients and their functions, role of flux ingredients and shielding gases forces during metal transfer, modes of metal transfer in are welding.

Module - III

Resistance webling process: Spot Welding, Seam, Projection, Batt welding, Flash Butt Welding,

percussion welding.

Solid state welding process: Cold Welding, Diffusion Welding, Ultrasonic Welding, Explosive Welding, and Friction Welding'

Radiant energy welding process: Electrical Beam Welding, Laser Beam Welding.

Module - IV

Welding distortion: Distortion and Residual Stresses, Types, Control of welding Distortion, Various discontinuities in welds, Trouble shooting.

Brazing, Soldering and their Application: Hydrogen Induced Cracking

Module - V

Design of Weldmont: Weld Geometry, Eccentric Londing Designing Torsion and bending, Designing welding fixtures.

Testing, Inspection and Specification: Destructive and Non-destructive methods of testing weldment, WPS, PQR, and ASME section IX Welding.

Robotics and Automation in Welding: Modes of Automation, Positioners, Welding Fixtures, and Arc Motion Devices, Under Welding/

B.Tech M15em	IP061PE31	Material Management	3	2		15	13	70	100	3

COURSE OBJECTIVES:

- 1. To provide the concept of effective and efficient purchase, various inventory policies and models.
- To provide the concept of effective and efficient store management by implementing modern techniques like JIT and MRP.
- 3. To provide the concept of various models of inventory control.

COURSE OUTCOMES:

After completion of the course, the students will be able to

- CO1: Develop an ability to perform the sole of a materials manager in an organization.
- CO2: Shall be able to manage the activities of materials manager lifer purchasing, inventory analysis, atorage etc.in a scientific manaer.
- CO3: Shall be able to improve due date performance through use of MRP techniques with in capacity constraints.
- CO4: Shall be able to practice material planning through modern materials management tools like JIT, DBR etc.
- CO5: Understand ethical issues in purchasing and negotiations

COURSE CONTENT:

Module - 1

Introduction: Definition and scope, concept of integrated materials management, materials research, materials planning and budgeting, codification, standardization.

Purchasing: Objective and function of purchasing department, purchasing procedure, negotiation and source-selection.

Module - II

Types of parchasing: Buying seasonal commodities, purchasing under uncertainty, purchasing of capital equipment, international purchasing, public buying, legal concept in buying, insurance buying, price forecasting.

Module-III

Stores management: Stores system and procedure, incoming material control, stores accounting and stock verification, obsolete, surplus and scrap management.

Guru Ghasidas Vishwavidyalaya Matallasah kikisih telatri kisain ke2016. 3 d201 Koni, Bilaspur – 495009 (C.G.)

DEPARTMENT OF INDUSTRIAL & PRODUCTION ENGINEERING, GGV, BILASPUR CE

Module - IV

Basic inventory system: Concept of inventory, types of inventory, selevant costs of inventory, economic order quantity, inventory control techniques, basic models of inventory.

Spare parts management: Definition of spaces and its classification, MUSIC-3D, view of spares, multiechelon spares inventory.

Module - V

Value analysis: Volue importance, normal degree value analysis applied to purchase, organizing for value analysis, cost analysis and value analysis and purchase research, material and process selection in VE design, material, process and supplier decisions.

11.1

Guru Ghasidas Vishwavidyalaya Matiliani kilikili telan kesisis (2016, 5420) Koni, Bilaspur – 495009 (C.G.)

DEPARTMENT OF INDUSTRIAL & PRODUCTION ENGINEERING, GGV, BILASPUR CE

Flow pattern design: Overall system flow cycle, need and advantage of planned material flow, factors for consideration, designing flow pattern, flow patterns for production lines and assembly lines methods.

Module - IV

Material Handling: Scope and functions of material handling, manual mechanical handling ratio, principles of material handling, analysis of material handling problem, classification of material handling system, salient features and application of general purpose material handling equipment, material handling in stores and wavehouses, automation in part handling and industrial robots, optimum allocation of material handling equipment.

Module - V

Automated material handling system: Concept of AGVs, AICRS and matheds to minimize cost of material handling, safety in moterial handling, evaluation of material handling process, design procedure of cranes, hifts.

TEXT & REFERENCE BOOKS:

- 1. Practical plant layout Muther
- 2. Plant layout and design James More

						CT4	CT-II		DOLM	
B Tech VI Sem	IPO6TPE33	Maintenance & Reliability Engineering	3	4	•	15	в	70	100	3

COURSE OBJECTIVES:

Cou

 To enable the student to understand the principles, functions and practices adapted in industry for the successful management of maintenance activities.

- 2. To provide the concept of various types of maintenance system used in industries.
- To impart knowledge on reasons for failure and the consective and preventive measure adopted to reduce them:
- To make the students to be familiar with the concept of reliability engineering.
- To make the students to understand the various maintenance and logistics means or the execution of various services.
- To import knowledge on creating various tools for maintainability of mechanical system.

COURSE OUTCOMES:

After completion of the course, the students will be able to

CO1: Application of concepts of the course leads to the optimization of equipment, procedures, and

departmental budgets to achieve better maintainability, reliability and availability of equipment.

Module - 1

Concept of reliability: Objectives, applications, area of use, use of reliability in industry, reliability functions, mean time between failures, hazard rate function, baft tub curve, conditional reliability, probability density function, failure rate, failure density, hazard rate, succertainty measures.

Module - II

Constant and time dependent failure models: Exponential, Webell, normal and lognormal distributions, discrete distribution, binomial distribution, Poission distribution.

Reliability of systems: Series, parallel, mixed connected systems, K-out -of -M system concept of redundancy, objectives, applications, redundant standby systems, system structure functions, minimal cuts and minimal paths, common mode failures, three state devices.

Module - III

Determination of reliability (state dependent systems): Markov analysis, load sharing system, standby systems, depraded systems.

Guru Ghasidas Vishwavidyalaya Matiliani kilikili telan kesisis (2016, 5420) Koni, Bilaspur – 495009 (C.G.)

DEPARTMENT OF INDUSTRIAL & PRODUCTION ENGINEERING, GGV, BELASPUR OF

Failure analysis: Introduction to failure mode and effect analysis, FMEA and FMECA, criticality analysis, fault tree diagram, event tree.

Availability. Concept and definitions, types of availability model, system availability.

Module - IV

Introduction: Objectives and policies of maintenance, maintainability terms and definitions, maintainability organization functions and tasks, estimation of maintenance cost.

Types of maintenance: Breakdown, predictive, replacement, on-line, off-line, perventive maintenance, reconditioning and correction maintenance, preventive maintenances w/s, repair, reliability centered maintenance, condition-based maintenance, principals and level of CBM.

Module - V

Total productive maintenance: Geah objective benefits of TPM, component of TPM, calculation of OEE, training for maintenance personal, objective and level of training, types of training methodology, evaluation of maintenance department

TEXT & REFERENCE BOOKS:

B Tech VI Sem	IP06TPE41	Autorsobile Engineering	3	3		15	15	70	100	1

COURSE OBJECTIVES:

- 1. To provide the knowledge of basic structure of an automobile.
- 2. To provide the knowledge of transmission system and its various elements.
- 3. To provide the knowledge of clutches and suspension system
- 4. To provide the knowledge of braking system.
- 5. To provide the knowledge of steering system and engine emissions.
- COURSE OUTCOMES:

After completion of the course, the students will be able to

- CO1: Graduates will gain a strong foundation in core automobile engineering, both in theoretical and applied concepts.
- CO2. Acquire knowledge and hands-on competence in the design and development of automobile.
- CO3: Graduates will develop an ability to identify and solve automobile engineering maintenance problems.

COURSE CONTENT:

Module - 1

Introduction of an automobile: Component and basis structure of automobile, classification, difference between automobile and automotive, the classification & classification, defect in frames, frameless construction & specifications. Wheel and types: Types of wheel, wheel dimension, desirable types properties, types of types, type material, type dimension, factors affecting type life.

Module - II

Transmission system: Function of transmission types, sliding mesh gene box, constant mesh gene box, synchro mesh gene box, torque converter, propeller shaft, universal joint, hook joint, final drive, differential, performance of gene box.

Module - III

Clutches: Requirement, function & type of clutch, dry friction clutch, wet friction clutch, clutch plate, single plate & multiple plate clutch, centrifugal clutch and fluid fly wheel.

Superation system function and requirement, leaf spring, torsion har, telescopic shock absorber.

15

Guru Ghasidas Vishwavidyalaya Matallorah kilikirih telani kesini kemi 5 di 201 Koni, Bilaspur – 495009 (C.G.)

DEPARTMENT OF INDUSTRIAL & PRODUCTION ENGINEERING, GGV, BILASPUR CE

Module - IV

Brakes: Function and requirement, baske efficiency, wheel skidding, types of baske, electrical, mechanical and hydroulic & pneumatic baskes, master cylinder, wheel cylinder, self-actualizing baskes, brake dram, brake liners, brake shoe, trouble shooting.

Module - V

Front axle and suspension wheel alignment purpose: Factor of front wheel alignment, steering geometry, correct steering angle, steering mechanism, under steer and over steer, steering gear, power steering, reversibility of steering gears, steering gear ratio, calculation of turning radius.

Engine emission: Entission standard of vehicle in India, Euro arms, emission, testag, Principle of analtipoint fact injection (MPFI), component of MPFI, different sensors of MPFI system, vehicle air conditioning.

B.Tech VI Sem	IP061PE42	Power Plant Engineering	3			15	15	70	100	3

DEPARTMENT OF INDUSTRIAL & PRODUCTION ENGINEERING, GGV, BILASPUR CE

1. To provide the knowledge related to various sources of energy and steam power plant.

2. To provide the knowledge related to solar power plants and solar power plant.

3. To provide the knowledge related to nuclear power station.

4. To provide the knowledge related to geothermal power plant, wind energy and bio gas plant.

5. To provide the knowledge related to direct energy conversion systems.

COURSE OUTCOMES:

After completion of the course, the students will be able to

CO1: Demonstrate a basic understanding of various types of power plants.

CO2 Acquire knowledge and hands-on competence in the design and development of mechanical systems associated with power plants.

CO3: Compare different energy resources and choose the most appropriate based on local conditions

CO4: Perform simple techno-economical assessments of energy resources

CO5: Design power plant that meet specific energy demands, which are economically feasible and have a minimal impact on the environment.

COURSE CONTENT:

Module - 1

Sources of energy Present power position in India, non-conventional energy and their application, steam power plant, high-pressure beilers and their classification and working, boiler accessories and mountings, condenser and their types.

Module - II

Solar Energy: Solar Insolation calculation, flat plates and concentrating collectors for liquid and gases, construction, collector area calculation, heat removal factor, efficiency.

Solar System: Power plasts, low, medium and high temperature plants, solar dryers, solar cookers, solar refrigeration systems, solar panel.

Module - III

Nuclear Knergy: Introduction to nuclear engineering, release of energy by nuclear reaction, chain reaction, moderation, components of nuclear reactor, types of reactor, pressured water reactor, CANDU reactor, gas cooled reactor, liquid metal cooled reactor, breader reactor, nuclear materials.

Guru Ghasidas Vishwavidyalaya Matallasah kikisih telatri kisain ke2016. 3 d201 Koni, Bilaspur – 495009 (C.G.)

DEPARTMENT OF INDUSTRIAL & PRODUCTION ENGINEERING, GGV, BILASPUR CE

Module - IV

Geothermal power plant, Wind energy: Sources of geothermal energy and its types, type of notors, horizontal axis and vertical axis systema, system design and site selection blade material, wind power scenario in India.

Bio Gas Plant: Types, parameters affecting plant performance, plant design.

Module - V

Direct Energy Conversions: Fiel cells, thermo-electric, thermo ionic and MHD systems (magnetohydrodynamic system). Economic analysis of power plant tariffs.

TEXT & REFERENCE BOOKS:

- 1. Power Plant Engineering Domkundwar & Arora, Dhanpat Rai Publication.
- 2. Solar energy S.P. Sukhatme, TMH Publication.

Course	-			913 310		EVA	LUATH	es sci	IEME	
Name & Semester	Course No.	SUBJECT	L	T	P	INTE ASSES CT-I	RNAL SMUNT CT-II	ESE	SUB- TOTAL	CREDITS
B.Tech VI Sem	IPO6TPE45	Heat & Mess Transfer	3	2	2	15	в	70	100	3

COURSE OBJECTIVES:

- 1. To provide the basic principles of heat transfer due to conduction, convection and radiation:
- To provide the knowledge of fin design to enhance the heat transfer in real time situation.
- To provide the fundamentals of convection process and distinguish between natural and forced convection.
- 4. To design novel heat exchangers for domestic and industrial use.
- 5. To provide the knowledge radiation best transfer and the principles of mass transfer:

COURSE OUTCOMES:

After completion of the course, the students will be able to

- CO1: Classify and differentiate between various modes of heat transfer.
- CO2 Design in extended surface for enhancing heat transfer for any device/equipment.
- CO3: Calculate heat transfer through my substance for both steady and unsteady state conditions.
- CO4: Identify the type of convection process and calculate heat transfer in any real time given situation.
- CO5: Design an improved heat exchanger to maximize the heat transfer efficiently.
- CO6: Explain the radiation heat transfer phenomenon and apply the knowledge to design a new engineering device.

COURSE CONTENT:

Module -1

Introduction: Various modes of heat transfer, Fourier's, Newton's and Stefan Boltamaan's law, combined modes of heat transfer, thermal diffusivity, overall heat transfer coefficient.

Conduction: Thermal conductivity of solids, liquids and gases, factors in influencing conductivity measurement, general differential equation of conduction, one dimensional steady state conduction, linear heat flow through a plane and composite wall, tube and sphere, critical thickness of insulation, conduction with heat generation in flat and cylinders.

Module - II

First: Conduction convection system, extended surfaces rectangular, triangular circumferential and pin fins, general conduction analysis, fins of uniforms cross section area, heat dissignted by a fin, effectiveness and efficiency of fin.

Guru Ghasidas Vishwavidyalaya Matiliani kilikeli teleni kesis kulti 5.3420 Koni, Bilaspur – 495009 (C.G.)

DEPARTMENT OF INDUSTRIAL & PRODUCTION ENGINEERING, GGV, BILASPUR (E

Transient (Unsteady state) heat conduction: Transient conduction in solids with infinite thermal conductivity, Transient conduction in solids with finite conduction and convective resistance.

Module - III

Forced Convection: Physical mechanism of forced convection, dimensional analysis for forced convection, velocity and thermal boundary layer, flow over plates, flow across cylinders and flow in tube, Reynolds analogy.

Natural Convection: Physical mechanism of natural convection, dimensional analysis of natural convection, empirical relationship for natural convection.

Module - IV

Boiling and Condensation: Boiling heat transfer, pool boiling, condensation heat transfer, film condensation.

Heat Exchangers: Different type of heat exchanger, determination of heat exchanger performance, heat exchanger transfer Module, analysis restricted to parallel and counter flow heat exchanger (LMTD and NTU method).

Module-V

Thermal Radiation: Introduction, absorption and reflection of radiant energy, emission, radiosity and invaliation, black and non-black bodies, Kärchhoff's law, intensity of radiation, radiation exchange between black surface, geometric configuration factors.

Introduction to Mass Transfer: Mass transfer processes: classification, concentrations, velocities and fluxes, molecular diffusion, eddy diffusion, convective mass transfer.

TEXT & REFERENCE BOOKS:

		SUBJECT	1	T	r	a second second second second	RNAL SMENT CL-II	ESE	SUB- TOTAL	CREDITS
B Tech VI Sem	IP96TOE11	Enterprise Renotates Planning	3		÷	15	15	70	100	3

COURSE OBJECTIVES:

 To provide and gain insight into process views of organizations and tools and techniques used to model both as-is and to-be models.

- 2. Apply the process modeling techniques in one or more modelling environments.
- 3. Summarize basic concepts, tools and techniques of enterprise resource planning (ERP)
- Describe the key implementation issues of ERP.
- 5. Reorganize the current and future trends in ERP.

COURSE OUTCOMES:

After completion of the course, the students will be able to

- CO1: Capable to apply key technical terminology in enterprise information systems as they apply in different ERP products and development methods.
- CO2: Understand key differences between the major ERP applications (such as SAP R/3).
- CO3: Analyze a current architecture and perform an effective gap analysis before an ERP implementation
- CO4: Be able to map enterprise architectural resources to a contemporary Enterprise Architecture mapping tool

COURSE CONTENT:

Module -1

Introduction to Enterprise resource planning: Evolution of ERP, MRP, MRP-II, e-ERP, generic business model with reference to ERP, structure of ERP. Two tier architecture client, server, three tier architecture, repository, RDBMS, operating systems, generic model of ERP system - design tree node structure, design of, role/activity diagrams, benchmarking, types of benchmarking, process of benchmarking.

Module - II

Introduction to Business Process Re-engineering: Procedure of BPR, principle of BPR, process improvement, process redesign.

Module - III

Analysis of risk and uncertainty: Various approaches for risk evaluation introduction: supply chain management and ERP, understanding the supply chain with case examples, supply chain performance 21

Guru Ghasidas Vishwavidyalaya Matallorah kilikirih telani kesini kemi 5 di 201 Koni, Bilaspur – 495009 (C.G.)

DEPARTMENT OF INDUSTRIAL & PRODUCTION ENGINEERING, GGV, BILASPUR (E

with measures, achieving strategic fit and scope, supply chain drivers, supply chain obstacles, ERP vs SCM, benefits of supply chain improvement, introduction of logistics types of logistics, types of logistics, benefits of logistics.

Module - IV

Integrated SAP model: Integrated data, master data, transactional data, integrated processes, evolution electronic data interchange (EDI), use of EDI, and benefits of EDI, selection of ERP, introduction opportunities and problems in ERP selection, approach to ERP.

Module - V

Origins of SAP: SAP's markets, SAP architecture and integration, SAP business structure, customization of SAP, SAP R/J material management, sales and distribution, production, plant maintenance, quality management, methodology for ERP implementation, implementation phases, implementation of life cycle implementation failure.

TEXT & REFERENCE BOOKS:

Name & Course Semester	Course No.	SUBJECT	L	T	P	and the second second second second	RNAL SMENT CT-II	ESE	SUB- TOTAL	CREDITS
B.Tech VI Sen.	IP06TOE12	Metagement Information System	3		5	15	15	70	100	3

COURSE OBJECTIVES:

- Describe the major technological, organizational, behavioral and ethical issues facing today's information systems professional.
- Retain currency in the face of rapid technological change by reading and understanding technical literature.
- Critically and comparatively evaluate technical descriptions of computer hardware and software products.

COURSE OUTCOME:

After completion of the course, the students will be able to

- CO1: Summarize the foundation for design and analysis of supply chains and synthesize advanced and specialized concepts, principles and models for operational and strategic improvement.
- CO2: Analytically examine the supply chain of organizations and measure performance improvement.
- COL Summarize basic concepts, tools and techniques of enterprise resource planning.

COURSE CONTENT:

Module - 1

Organization & types, decision making, cost & value of information, introduction to information in business, types of information system, need, importance, scope and characteristics of information system, component of information system, developing information system. MIS concept evaluation and characteristics structure of MIS, MIS via data processing, MIS and DSS.

Madule - II

Solving business problems with information system, concept of balanced MIS, effectiveness & efficiency criteria, tool and techniques of MIS- dataflow diagram, flow chart etc.

Data base technology: Introduction, data base and enterprise management, data independence data base approaches, data base architecture, data models, DBMS SQL and working, 4GL, data administration.

23

Name & Semester		SUBJECT		T	P	INTE ASSES CL4		ESE	SUB- TOTAL	CREDITS
B Tech VI Sem	IPO6TOE13	Six Signa and DOE	3			15	-15	70	100	3

COURSE OBJECTIVES:

Improve the customer's satisfactions and quality of product and services.

2. Reduce the process cycle time and cost saving and developing staff scale.

3. Understanding the issue and principle of design of an experiment.

COURSE OUTCOMES:

After completion of the course, the students will be able to

CO1: Explain the practical implications of Design of experiments.

CO2: Adopt ANOVA techniques to identify sufficient factors.

CO3: Apply Tagachi techniques to conduct experiments in research work:

CO4: Execute various phases of Six Sigma for real time projects.

COURSE CONTENT:

Module - 1

Quality perception: Quality in manufacturing, quality in service sector, differences between conventional and six sigma concept of quality.

Probability distribution: Normal, binomial, poisson distribution.

Basics of Six Sigma: Concept of six sigma, defects, DPMO, DPU, attacks on X*S, customer focus, six sigma for manufacturing, six sigma for service, Z score, understanding six sigma organization, leadership cosmeil, project sponsors and champions, master black belt, black belt, green belts.

Module - II

Methodology of Six Sigma: DMAJC, DFSS, models of implementation of six sigma, selection of six sigma projects, introduction to software for six sigma, understanding minitab, and graphical analysis of minitab plots.

Module - III

Six Sigma tools: Project charter, process mapping, measurement system analysis, hypothesis testing, quality function deployment, failure mode effect analysis.

Module - IV

Design of experiments: Applications of experimental design, basic principles, design guidelines, statistical design and problems, experimental design, statistical analysis of data, loss function and its colculations.

Guru Ghasidas Vishwavidyalaya Matallasah kikisih telatri kestis kemi 5 ditti Koni, Bilaspur – 495009 (C.G.)

DEPARTMENT OF INDUSTRIAL & PRODUCTION ENGINEERING, GGV, BILASPUR CE

Module - Y

Comparative experiments: Statistical concepts, sampling and sampling distributions, inferences about the differences in means, randomized design and inference about differences in means paired comparison design, inferences about the variances of normal distributions, experiment with single factor; the analysis of variance (ANOVA), analysis of fixed effects models, model adequacy checking, practical interpretations of results, sample computer output, determining the sample size, discovering the dispersion effect, the regression approach to the ANOVA, and non-parametric method in the ANOVA.

DEPARTMENT OF INDUCTION & PRODUCTION ENCINEERING GOV BEACHING OF

COURSE OBJECTIVES:

- 1. Identify and classify different measuring tools related to experiments.
- 2. Identify, define and explain scentracy, precision and some additional terminology
- 3 Conduct, analyze, interpret and present measurement data from measurements experiments;
- 4. Identify sources of variability, error and uncertainties.
- Demonstrate excellent laboratory skills and techniques including the proper use of relevant instruments and related technology.
- 6 Enhance the ability to apply knowledge of mathematics, statics, physics and engineering sciences:

COURSE OUTCOMES:

After completion of the course, the students will be able to

CO1: Student will become familiar with the different instruments that are available for linear, angular, roundaces and roughness measurements they will be able to select and use the appropriate measuring instrument according to a specific requirement (in terms of accuracy, etc).

LIST OF EXPERIMENTS:

- 1. To measure pressure using Boundou pressure gauge:
- To calibrate pressure gauge using Dead weight pressure gauge tester.
- 3. To measure temperature using theminiter
- 4. To measure flow rate using Rota meter.
- 5. To measure angle using Augular sensor.
- 6. To measure tongae using Tongae transducer.
- To measure pressure using pressure transducer.
- To measure temperature by thermocouple;
- Measurements of lengths, heights, diameter by Vernier Calipers, Vernier height gauge, Micrometers.
- 10 Measurement of various angles using Bevel protractor. Sine bar & Combination set:
- 11. Calibration of Vernier caliper. Micrometer. Height gauge, Depth micrometer using slip.

गुरू धासीदास विश्वविद्यालय कोनी, बिलासपुर - 495009 (छ.ग.)

Guru Ghasidas Vishwavidyalaya Matultioni, kilideliy teleni kestis ke2015. B d2019 Koni, Bilaspur – 495009 (C.G.)

DEPARTMENT OF INDUSTRIAL & PRODUCTION ENGINEERING, GGV, BILASPUR CE

Course Name & Semester	Course No.	SUBJECT	PERIO DS			EVALUATION SCHEME			CREDUTS
			I.	T	P	INTERNAL	ESE	SUB- TOTAL	CREDITS
H.Tech VI Sem.	B*06PPC07	Welding Engineering Lab	-		- 11	30	20	50	1

COURSE OBJECTIVES:

- 1: Availability of various manual and automated welding processes.
- To provide information related to concepts, operating procedures of various weiging processes.
- To gain knowledge on practical aspects of different weiding processes and apply effectively on various engineering applications.

COURSE OUTCOMES:

After completion of the course, the students will be able to

- CO1: To acquire the knowledge and skills of medera welding techniques.
- CO2: To develop the skills of conventional welding techniques.
- CO3: To have a practical exposer various testing methods of welding joint.

LIST OF EXPERIMENTS:

- 1. To make a Lap joint, using the given two M.S pieces by are welding.
- 2. To make a corner joint, using the given two M.S pieces by are welding.
- 3. To prepare a built joint with mild steel strips using brazing technique:
- 4. To prepare a bott joint with mild steel strip using GMAW technique:
- To study and observe the welding and brazing techniques through demonstration and practice (Ges. MKG; TKG, Brazing).
