Table of Contents

Preface	xxi
Acknowledgment	xxix
Chapter 1	
Metaheuristic-Based Hybrid Feature Selection Models	1
<i>Sujata Dash, North Orissa University, India</i>	
Chapter 2	
Swarm-Based Nature-Inspired Metaheuristics for Neural Network Optimization	23
<i>Swathi Jamjala Narayanan, VIT University, India</i>	
<i>Boominathan Perumal, VIT University, India</i>	
<i>Jayant G. Rohra, VIT University, India</i>	
Chapter 3	
A Novel Hybrid Model Using RBF and PSO for Net Asset Value Prediction	54
<i>C. M. Anish, Guru Ghasidas Vishwavidyalaya, India</i>	
<i>Babita Majhi, Guru Ghasidas Vishwavidyalaya, India</i>	
<i>Ritanjali Majhi, NIT Warangal, India</i>	
Chapter 4	
Memetic Algorithms and Their Applications in Computer Science.....	73
<i>B. K. Tripathy, VIT University, India</i>	
<i>Sooraj T. R., VIT University, India</i>	
<i>R. K. Mohanty, VIT University, India</i>	
Chapter 5	
A New Data Hiding Scheme Combining Genetic Algorithm and Artificial Neural Network.....	94
<i>Ayan Chatterjee, Sarboday Public Academy, India</i>	
<i>Nikhilesh Barik, Kazi Nazrul University, India</i>	

Chapter 6

A Statistical Scrutiny of Three Prominent Machine-Learning Techniques to Forecast Machining Performance Parameters of Inconel 690 104

Binayak Sen, NIT Agartala, India

Uttam Kumar Mandal, NIT Agartala, India

Sankar Prasad Mondal, Midnapore College (Autonomous), India

Chapter 7

Insights Into Simulated Annealing..... 121

Khalil Amine, Mohammed V University, Morocco

Chapter 8

Automatic Test Data Generation Using Bio-Inspired Algorithms: A Travelogue..... 140

Madhumita Panda, North Orissa University, India

Sujata Dash, North Orissa University, India

Chapter 9

Development of an Efficient Prediction Model Based on a Nature-Inspired Technique for New Products: A Case of Industries From the Manufacturing Sector 160

Vikas Bhatnagar, NIT Warangal, India

Ritanjali Majhi, NIT Warangal, India

S. L. Tulasi Devi, NIT Warangal, India

Chapter 10

Applications of Hybrid Intelligent Systems in Adaptive Communication 183

Atta ur Rahman, University of Dammam, Saudi Arabia

Chapter 11

DE-Based RBFNs for Classification With Special Attention to Noise Removal and Irrelevant Features 218

Ch. Sanjeev Kumar Dash, Silicon Institute of Technology, India

Ajit Kumar Behera, Silicon Institute of Technology, India

Sarat Chandra Nayak, Kommuri Pratap Reddy Institute of Technology, India

Chapter 12

Competency Mapping in Academic Environment: A Swarm Intelligence Approach 244

Sushri Samita Rout, Silicon Institute of Technology, India

Bijan Bihari Misra, Silicon Institute of Technology, India

Chapter 13

An Overview of the Last Advances and Applications of Greedy Randomized Adaptive Search Procedure 264

Airam Expósito Márquez, Universidad de La Laguna, Spain

Christopher Expósito-Izquierdo, Universidad de La Laguna, Spain

Chapter 14

Defect Detection of Fabrics by Grey-Level Co-Occurrence Matrix and Artificial Neural Network..... 285

Dilip k. Choudhury, GIET Gunupur, India
Sujata Dash, North Orissa University, India

Chapter 15

A Holistic-Based Multi-Criterion Decision-Making Approach for Solving Engineering Sciences Problem Under Imprecise Environment..... 298

Syed Abou Iltaf Hussain, NIT Agartala, India
Sankar Prasad Mondal, Midnapore College (Autonomous), India
Uttam Kumar Mandal, NIT Agartala, India

Chapter 16

A Comprehensive Review of Nature-Inspired Algorithms for Feature Selection 331

Kauser Ahmed P, VIT University, India
Senthil Kumar N, VIT University, India

Chapter 17

Nature-Inspired-Algorithms-Based Cellular Location Management: Scope and Applications..... 346

Swati Swayamsiddha, Indian Institute of Technology Kharagpur, India
Chetna Singhal, Indian Institute of Technology Kharagpur, India
Rajarshi Roy, Indian Institute of Technology Kharagpur, India

Chapter 18

Fuzziness in Ant Colony Optimization and Their Applications 363

Deepthi P. Hudedagaddi, VIT University, India
B. K. Tripathy, VIT University, India

Chapter 19

Application of Nature-Inspired Technique to Odia Handwritten Numeral Recognition 377

Puspalata Pujari, Guru Ghasidas Vishwavidyalaya, India
Babita Majhi, Guru Ghasidas Vishwavidyalaya, India

Chapter 20

Intelligent Technique to Identify Epilepsy Using Fuzzy Firefly System for Brain Signal Processing 400

Sasikumar Gurumoorthy, Sree Vidyanikethan Engineering College (Autonomous), India
B. K. Tripathy, VIT University, India

Chapter 21

Analysis and Implementation of Artificial Bee Colony Optimization in Constrained Optimization Problems 413

Soumya Sahoo, C. V. Raman College of Engineering, India

Sushruta Mishra, C. V. Raman College of Engineering, India

Brojo Kishore Kishore Mishra, C. V. Raman College of Engineering, India

Monalisa Mishra, C. V. Raman College of Engineering, India

Chapter 22

Escalation of Prediction Accuracy With Virtual Data: A Case Study on Financial Time Series..... 433

Sarat Chandra Nayak, Kommuri Pratap Reddy Institute of Technology, India

Bijan Bihari Misra, Silicon Institute of Technology, India

Himansu Sekhar Behera, Veer Surendra Sai University of Technology, India

Chapter 23

Determination of Spatial Variability of Rock Depth of Chennai..... 462

Pijush Samui, National Institute of Technology Patna, India

Viswanathan R., Galgotias University, India

Jagan J., VIT University, India

Pradeep U. Kurup, University of Massachusetts – Lowell, USA

Compilation of References 480

Chapter 19

Application of Nature-Inspired Technique to Odia Handwritten Numeral Recognition

Puspalata Pujari

Guru Ghasidas Vishwavidyalaya, India

Babita Majhi

Guru Ghasidas Vishwavidyalaya, India

ABSTRACT

In this chapter an effort has been made to develop a hybrid system using functional link artificial neural network (FLANN) and differential evolution (DE) for effective recognition of Odia handwritten numerals. The S-transform (ST) is chosen for feature extraction from handwritten numerals and these are further reduced by using principal component analysis (PCA). After reduction of feature the reduced features are applied to FLANN model for recognition of each numeral. Further differential evolution algorithm (DE) is used for the optimization of weights of FLANN classifier. For performance comparison, genetic algorithm (GA) and particle swarm optimization (PSO) based FLANN models (FLANN_GA and FLANN_PSO) are also designed and simulated under similar condition. The efficiency of proposed DE based FLANN (FLANN_DE) method is assessed through simulation with standard dataset consisting of 4000 handwritten Odia numerals. The results of three models are compared and it is observed that the FLANN_DE model provides the best result as compared to other models.

INTRODUCTION

Over the last ten decades optical character recognition (OCR) is the most demanding area which comes under the field of pattern recognition, artificial intelligence and machine vision. There are varieties of applications of handwritten character such as postal pin code verification, passport verification, digital library system, document processing, forgery detection in banks and many more. OCR is the translation of handwritten and printed images of character into editable character. The challenging task lies in the recognition of optically processed characters. In off-line recognition method characters are recognized

DOI: 10.4018/978-1-5225-2857-9.ch019

later, after their creation. But the characters are recognized immediately after their creation in an on-line method. OCR can recognize both printed and handwritten characters, but the efficiency of recognition precisely depends on the constraints associated with the characters. More constrained the character is, greater is the efficiency of the OCR system. It is very difficult to develop OCR system for totally unconstrained handwritten characters. Recognition of handwritten characters and numerals is more complex task than the printed character. Many variations are observed in handwritten character due to the style of writing, added noise, missing part, devices and medias used for image acquisition. These may be due to different size, stroke and slant of the image. Therefore there is a requirement to develop robust system which can recognize effectively any handwritten characters. This chapter develops a recognition model for offline handwritten Odia numerals using FLANN as classifier and a bio-inspired technique such as differential evolution (DE) for the weight optimization of the FLANN model. Preprocessing is the first step of OCR followed by feature extraction and classification. Before developing the recognition model preprocessing and feature extraction tasks are performed. The numeral images are preprocessed first. Then feature based recognition method is applied to measure and extract significant features from the numerals image. Then a hybrid system is developed by using FLANN classifier where the weights of FLANN classifier are optimized with DE algorithm. The features are compared to the prototypes developed in training phase. The description which provides the closest match provides the recognition. For feature extraction the recently developed S-transform (M. Hariharan et.al, 2014) is applied which retains the significant features of the pattern. These features being more in dimensions are then reduced by applying principal component analysis (PCA). For the classification task FLANN model is used, the weights of which are adjusted by minimizing the squared error value using the DE algorithm.

BACKGROUND

A concise study of the chronicle background related to the advancement of OCR is as follows. A hybrid system (S. Rajasekaran, 2003) is the integration of one or more techniques to solve complex problem in efficient way. The objective of hybrid system is to provide a better solution by suitably mixing various techniques so as to overcome the weakness of each technique. In literature several research works have been reported for recognition of characters by using hybrid techniques. A hybrid of GA and Harmony Search algorithm (HS) is suggested in (M.Y.Potrus, 2014) for online Arabic text Recognition. The problem is solved in two phases: text segmentation using dominant point detection, and recognition-based segmentation using GA and HS. The performance of the system is evaluated on 4500 Arabic words and benchmark (ADAB) dataset consisting of 7851 Arabic words with a recognition rate of 93.4% and 94–96% respectively. A feed forward neural network with evolutionary algorithms has been employed by the authors (S.Srivastava et.al, 2011) for recognition of handwritten English alphabet. A new method has been developed in (T. Pourhabibi et.al, 2011) by combining Simulated Annealing (SA) and GA for selection of feature subset using Persian fonts and a good recognition performance is suggested. The convergence rate of Guided Evolutionary Simulated Annealing is found to be better than the GA. A hybrid approach has been proposed in (N. Ozturk et.al, 2004) for feature recognition problem to step down the computational complexity with neural networks (NNs) and GAs to step down the computational complexity. Optimum network architecture has been developed by using GA based input selection approach. In (N.Das et.al, 2012) for recognition of Bangla compound character the authors have developed
