Abstract:

Abstract This invention works in the way in which the cold air is drawn into the lower portions of the glass tube via the bottom half of the tube. Further, the air is dire upper portions within the tube andthe turbulence created by the pierced twisted tape subsequently, the air absorbs heat energy from the absorber surface and ther reaches the upper half of the header followed by the outlet of the suction blower. The pierced twisted tape is to be optimized for create the turbulence and achieving temperature.
