Bilaspur (Chhattisgarh), India**

**Venue:**

Department of Forestry, Wildlife & Environmental Sciences  
Guru Ghasidas Vishwavidyalaya, Bilaspur (Chhattisgarh)

## About the training program

Nature is a constant source of satisfaction for many in the modern world. With the shadow of civilization rapidly encroaching on natural spaces, capturing this scenery is extremely important, now more than ever. A nature photographer does just that. From dangerous underwater photo shoots and scorching hot deserts to photos of finely manicured gardens; the opportunities are countless. The nature photographer provides the world with views its inhabitants might never have experienced were it not for this form of art. A career in nature photography often requires skills that may not be needed in some other types of photography, like fashion photography. First of all, animals usually won't cooperate well when it comes to posing. This often requires a great deal of patience, and obtaining one single quality shot can often take hours, or even days. Nature photography can be turned into a great career too which includes nature journalists, wildlife filmmaker, and many more. A comprehensive structured Skill Development Program combining basic education and vocational courses for various technologies related to Nature Photography could establish a vital link between conservation and a source of earning money and seems to be the need of the hour. The two days training program on Nature Photography will promote creation of new methods for taking innovative photographs along with appropriate skill development and capacity building to entrepreneurship among the students which is expected to create greater business opportunities at various levels.
